1892

March 19th concluded

We started back in the passage from which we had just came & soon found a passage leading to the left. The passage was a little like a crevice & led N.W. & S.E.. After going about 50 feet we found a hole leading up. I went up about 30 feet & found that it was wedged full of rock. It looked very much like there was a large opening above but we could not get up so we followed the passage on to the South East & soon came to a place that I ~~ego~~ recognized. We soon came to a room just below the Flour mill Hopper. We then went to the entrance by way of the Crystal Palace. I will give an illustration of the inscription that we put in the first room that we discovered on this trip.

March 20th

Collisium Route

It has been bad weather on the exterior part of this country all day. We expected a load of visitors from Hot Springs today but the weather has been so bad that we did not look for them today. About 10 o'clock G.A. Stabler, J.D. McDonald, E.L. Mc Donald & myself started in the cave on an exploring expedition. At first we hardly knew where to go, as there is so many places that need exploring, but I suggested that there
