Comment Letters 2,001–4,000

Correspondence ID: 2001

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Lyn N

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

When is this going to happen!!!! This damn cruelty has been going on for years. I'm sick of the preferential treatment that ranchers and cattle get. This has gone on far too long. This is a National Park! These great Elk are dying because of these delays. Remove the damn fence already and get ride of the cattle that's polluing the seashore and ocean. Having that many cattle craping and urinating is comparable to letting the City of Sacramento letting their sewage run in the streets untreated!

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Richard Rizzo

I would be nice if we, your employers, did not have to beg you to save wild animals over the domesticated ones, but I guess the ranchers give you more money. The thing is, no matter how much you leave to your grandchildren, they will despise you for the terrible way these wild elk have been treated.

Sincerely, Mrs. Judith Anderson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Andrea Ackerman

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Joyce Barringer

Having spent a truly wonderful day in Point Reyes National Park with a guide I cannot believe it is suggested that Tule Elk be killed in favor of increasing cattle herds. The one thing that struck me and those traveling with me was the excessive number of cattle and how few in number the beautiful Elks. This is a wonderful park and has amazing variety of wildlife it would be great shame to do anything that would diminish it and disturb these beautiful creatures. Nature is precious

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms Judith Embry

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Correspondence ID: 2144

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Please support Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area.

Point Reyes National Seashore is a very special place, both to the First People and to the many visitors who come every year. However, this “protected” seashore is being ravaged by beef and dairy operations within its boundaries.

The cattle use vast amounts of water and land to graze. In return, they dump 10 million gallons of feces and urine on national parklands every year. They trample habitat, kill endangered grassland species, introduce invasive weeds, and despoil streams with fecal coliform, imperiling threatened species such as Coho salmon and California red-legged frogs, among others.

These ranches add little to the economy. “Beef and milk are overproduced in California and the United States, and both are heavily subsidized, holding prices below actual costs,” says Bob Johnston, Inverness resident and retired professor of land use planning at UC Davis.

NPS has fenced the elk inside one part of the national seashore, effectively trapping when food and water grow scarce. There have been numerous deaths of elk in this area, the sole reason being they can't leave the area to forage for food and water.

Please recognize the status of PRNS as a protected area and allow this fence to be taken down so the elk can roam freely.

Sincerely, Mr. Mohan Gurunathan

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Joanna Saturno

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Chad Johnson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, J D

Ranchers arguments against fence removal are so played out. "Ranches are significant cultural blah blah blah!" Culturally significant is nowhere near an objective opinion. What about the "cultural significance" of a native animal with hardly any habitat?? And the argument that it was "already decided" in 1998 that fence removal was not possible...Do know how much has changed since 1998!? What did people even care about around the environment back then! What about the tribes that were here before any of these "historic" ranches!? What a crock of baloney. Ranchers will always be mad when they don't get their way, so let's get used to them being mad.

To Whom it May Concern,

I oppose the current penning of Tule Elk and believe that as an endangered species we should be encouraging the growth of their numbers and range. I have never understood how it can even be legal to fence them into a small area and keep them from recovery.

I believe the park service must do everything in its power to encourage the Tule Elk population to recover and spread throughout its former range and to move as it needs to in response to climate change and ecosystem responses to that change.

Cattle exist in the US by the millions and should not in any way prevent the restoration of this iconic and important species.

Thank you,

Teresa McGlashan

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dr. Diana Fries

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dostana Ljusic

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Danielle Dearing

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, JORDAN BAER

I want to see the elk herd confined and managed and the ranches supported in their agricultural tradition. I was around for the creation of GGNRA. It was never intended to be a wilderness area. The heritage ranches were part of the historic preservation.

It was risky to establish a herd of elk in an area with abundant vegetation and no predators. Now we're being asked to let elk roam unrestricted. Limitless growth of the herd in numbers and terrain will not only affect ranchers but the park visitors and park mission in general.

Please resist the environmental activists who want to make GGNRA an unmanaged wilderness. My family --dogs and all-- value the recreational opportunities of the historic ranch vistas and the open space and beach access.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Please support Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area.

Years ago I took my young boys out to see the Point Reyes Lighthouse. I was shocked and saddened to see the white crates along the way where the caged baby calves were kept. My boys asked why they were confined in this cruel way and I explained to them it is because people like dairy products. It was not a conversation I was expecting in a beautiful National Park

which should be about preserving natural ecosystems systems and local wildlife. It is not a place where environmentally destructive and cruel factory farms should be allowed.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Kathleen Willey

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Kelli Willis

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Anne Pearce

Dear National Park Service,

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore. The Tule Elk belong at Point Reyes National Seashore, the cattle do not.

It is time to give priority to the elk and not the ranchers who have broken all of the rules and feel entitled. The Tule Elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

The ranchers and their cattle have completely overstayed their welcome to the detriment of the elk. It is hurting our elk and the run-off is a disaster for the waters.

Thank you for allowing us a chance to plead that you do the right thing.

Bob and Sue Peisert

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Kristine Moy

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Ralph Barber

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Stephanie Trasoff

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Bonnie Butts

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Cynthia Springer

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Kimberly Hurschik

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Kelly Berry

I am not in favor of removing the Elk fence at the seashore. The Point Reyes Peninsula is the best organic dairying environment found virtually anywhere on the West Coast. I believe the ranchers on the Point do all they can to maintain and improve the environment on the ranches they occupy.

They're a big part of the local agricultural community both from a business and cultural standpoint. Anyone who understands ranching, I believe, supports ranching in the park.

Thank you for reading this.

Rick Lafranchi

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Elizabeth Ishmael

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Louis Grittani

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss gisele allard

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely, Mrs. regula hess

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Shanna Damien

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

GET RID OF THE GOD DAMNED CATTLE ! YOU WANT TO EAT THEM , THEN KEEP THEM ON A RANCH AND FEED THEM !

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and

manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Irene Kraker

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Andres Heljula

National Park Service,

We've been waiting for 45 years for the NPS to do the right thing and eliminate the Tule Elk killing fencing and get rid of the taxpayer-subsidized, polluting cattle ranches. NOW with the popular support to clean up our park. I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

I am writing to request that the tule elk at Tomales Point at Point Reyes National Seashore be treated with respect as the natural wildlife resource they are. They have been here a long time and belong here. Please remove the Tule Elk Fence and allow them to be free. They are such a joy to hear and to behold. They make visiting the park special, and to me are the epitome of the spirit of the park.

I hope the cattle that are allowed to graze here can be removed. You can tell just glancing at the earth they walk on how they damage the soil and are not naturally adapted to this area. Please consider the priorities a national park should abide by. It is not right that a few ranchers get to control this area that is for us all to enjoy in its natural state. I have been visiting this park frequently for many years and my voice should be heard. Please let the elk live here without being harassed or fenced in or killed. Certainly if their numbers increase to a point where they end up suffering, that would not sit well with most people. But we are not at that point. What the elk need is for the cows to leave and the natural animals and plants to flourish. For goodness sake please listen to us!

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms Nancy Dollard

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Kathy Tscheiner

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Javier Garcia

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Enrique Iglesias

Correspondence ID: 2889

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely, Mrs. Elodie ACCART

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Chante' Kline

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. David Ben Haim

Correspondence ID: 2904

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Ich unterstütze die vom National Park Service bevorzugte "Alternative B" für das Tomales Point Tule Elk Reserve am Point Reyes National Seashore, um den Zaun zu entfernen und die größte Tule-Elchherde des Parks zu befreien. Zäune und eingesperrte Tiere haben in Nationalparkeinheiten nichts zu suchen.

Bitte heben Sie außerdem die derzeitige Regelung im Allgemeinen Bewirtschaftungsplan auf, die das Töten ("Keulen") von Elchen in den beiden anderen Herden erlaubt, da sich die Herden vermischen können, wenn der Zaun entfernt wird. Ich bin gegen jegliches tödliche "Management" von Wildtieren in unseren Nationalparks.

Schließlich kann der Tule-Elch an der Küste nicht frei, gesund und sicher sein, bis private Rinderbetriebe entfernt werden, da sie Elche Kotbakterien im Boden, in Bächen und Teichen sowie durch Gülle übertragenen Rinderkrankheiten, einschließlich der Johne-Krankheit, aussetzen. Der NPS selbst zitiert eine Studie aus dem Jahr 1979, die ergab, dass die Hälfte der Milchviehbetriebe des Parks mit der Johne-Krankheit infiziert war. Private Viehzuchtbetriebe haben in unseren Nationalparks nichts zu suchen.

Ich danke dem National Park Service dafür, dass er öffentliche Kommentare zu diesem sehr wichtigen Thema angefordert und berücksichtigt hat.

Sincerely, Anja Romeikat

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Cathy Sikes

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Jay Davey

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johnne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely, liliane servais

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dr. Sho G

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. minna niemi

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Barbara Krantz

Correspondence ID: 3076

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Eu apoio a “Alternativa B” preferida do Serviço Nacional de Parques para a Reserva Tomales Point Tule Elk em Point Reyes National Seashore, para remover a cerca e libertar o maior rebanho de alces Tule do parque. Cercas e animais confinados não têm lugar nas unidades do parque nacional.

Além disso, por favor, revogue oficialmente o regulamento atual no Plano Geral de Manejo que permite o abate (“abate”) de alces nos outros dois rebanhos, uma vez que os rebanhos podem se misturar quando a cerca é removida. Oponho-me a toda “gestão” letal de quaisquer animais selvagens nos nossos parques nacionais.

Finalmente, o alce Tule do litoral não pode ser livre, saudável e seguro até que as operações privadas de gado sejam removidas, porque expõem os alces a bactérias fecais no solo, riachos e lagoas, e doenças transmitidas pelo esterco do gado, incluindo a doença de Johnne. O próprio NPS cita um estudo de 1979 que descobriu que metade das fazendas leiteiras do parque estavam infectadas com a doença de Johnne. As operações privadas de gado não têm negócios em nossos parques nacionais.

Agradeço ao Serviço Nacional de Parques por solicitar e considerar comentários públicos sobre esta questão tão importante.

Sincerely, Mrs. Fátima Marreiros

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Tom Doll

So the government takes down walls and allows people who we know nothing about to enter this country but they will leave walls up and allow rare elk to starve to death. How does that make any sense at all? It makes much more sense to go with the Alternate Plan B which would allow the elk, currently in a 2,900 acre area of poor forage known as the "Preserve," to finally roam free! It also would allow the NPS to consider building a fence to keep privately-owned cattle from entering Tomales Point.

Please consider this as it is the best way to truly live and let live.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Daved Wachsman

We have the utmost responsibility to protect our majestic wildlife for healthy ecosystems and future generations. To allow the unnecessary slaughter/demise of our precious wildlife for the benefit of greedy corporations and special interest groups is not only shameful, it is a national disgrace! The American people are watching. What you choose to save is what you say about yourself. Choose well for our country's iconic tule elk!

Correspondence ID: 3124

As a lawyer involved with the media, I know the destruction of elf by drought and starvation due to the shameful decision to maintain the fence has caused disgust against your body from millions of people around the country and world at large, People have questioned how could living creatures be treated in such a shameful way in the 21st century by a supposedly civilised country.

So please now ensure that this fence is removed to finally put a stop the cruel suffering you have inflicted upon these creatures.

Millions will be watching to see if you now remove the fence.

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes.

Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed, the elk to roam freely and steps should be taken to allow avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum

protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Alternative B

Thanks for hearing my view. I'm a Point Reyes local and a longtime park volunteer. I live here because of the park, and I'm generally in favor of anything that genuinely improves the health of this amazing ecosystem. Removing the elk fences seems like the a good next step in creating a national park that's truer to its ideals and mission to "preserve unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations."

I also support the park doing everything it can to improve access to natural water sources. If these aren't available, however, I think that we have a responsibility to provide water. Years of ranching have compromised the health of land and water in this area, and the system might not be able to adequately support native species, especially during times of drought.

Putting up fences to corral all the cows seems necessary to prevent problems that could be avoided by getting rid of the ranches altogether. However, the ranchers should be responsible for paying for the fences. Taxpayers are already subsidizing their profits. We shouldn't have to keep paying for ranch maintenance on top of doing what's necessary to restore habitat and to protect actual native species.

One more thing that I'd add to the plan is more interpretation for visitors who don't seem to understand that approaching elk can be dangerous. I've seen elk obviously upset and huffing at visitors who seem oblivious to everything but getting the best photo.

Sincerely, C Bear McGuinness

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. wendy berrey

I support the proposal to remove the fence for elk and allow them to roam free!

I have been reading about these elk for years! It's about time y'all take this fence down so these elk can roam free.. you know.. like all wild animals should be able to do!

I know I don't live in your state but like I said, I have known about these elk for years. And I also know a lot of them perished because lack of food and water because of being "fenced in"! Shame on whoever did this to these beautiful animals.

So I will say it again.. TAKE THE FENCE DOWN AND LET THE ELK ROAM FREE!!!

Thank you for your consideration in this matter.

Sincerely, Susan Welch

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Joselane Silveira

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Trois Moore

I am strongly opposed to keeping the native Elk herds fenced in. This unnatural condition limits their access to natural water and food. The ranch areas are a commercial endeavor- and not compatible with the intent of the Park Service mission to preserve natural areas and wildlife.

Discontinue that practice, please. If that means a compromise with the use of the areas so that the natural wildlife can live as nature intended- so be it. I understand the ranchers preference- but its not the intended use of the land as per the Park Service Mission.

RE: proposal to remove the fence from Pierce Point peninsula

If you cage a bird, you assume responsibility for the bird's welfare. The same applies to elk. If the option is to cull the elk herd by shooting or to remove the fence, thus enabling more animals to survive, I favor pulling down the fence.

Correspondence ID: 3208

Please allow the elk to roam free--take down the fence!

Thanks so much for your consideration--

Kathy Slawinski

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Gaye Georges

Please take down the elk fence in Pt Reyes National Seashore and save our elk!

Correspondence ID: 3239

We favor the removal of the Point Reyes National Seashore fence to allow the tule elk herd to roam free. This will also remove the 'responsibility' of the national park to cull the herd.

Over the years, the private ranchers have developed an entitled attitude about separating elk from cattle. They have received multiple concessions, fees, and services while neglecting runoff that degrades the land and streams.

The seashore belongs to the people, not just the ranchers.

Our vote for the Tomales Point elk fence removal is also a vote for ranchers to take responsibility for keeping cattle separate from the elk.

Respectfully,

Dennis & Kathleen Miller

Free the Pt Reyes elk. Tho I also fully support continued ranching in Pt Reyes (mainly since the ranches were established long before the Park existed, are families longtime livelihoods, & the ranchers are committed to sustainable agriculture), I also firmly believe the elk should never have been imprisoned.

Allow the ranchers to fence their grazing borders (at their own expense) if they choose, but let the elk roam just as the other herd does & as they do up north near Arcata. I never saw the logic of imprisoning this one herd in a relatively small area.

Otherwise relocating the herd to a free-roaming area elsewhere would be ideal (tho probably impossible to do safely for the elk.). Please make an opening or 2 in the fence & set the elk free.

Correspondence ID: 3245

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I FULLY SUPPORT the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. claudia fischer

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I cannot believe you do not see the danger this fence is causing these beautiful elk!!

WE AS HUMAN BEINGS ARE DESTROYING EVERYTHING THAT HAS BEEN GIVEN TO US TO ENJOY.

WE ARE DESTROYING OUR PLANET IN MULTIPLE CATASTROPHIC DAY BY DAY BUT DO WE STOP??? NO.

In my lifetime Ive personally watched many so called animal protection agencies, like Fish and Wildlife, look the other way when an animals life is on the line and there were groups of professional rescuers and sanctuaries ready and willing to take that animal and were refused. The animal was euthanized.

DO YOU ALL NOT SEE THAT IF WE DON'T START DOING THINGS DIFFERENTLY VERY SOON THERE WILL BE NO MORE BEAUTIFUL ANIMALS TO SEE????

MONEY RULES EVERYTHING AND IF WE AS A PEOPLE DON'T STEP UP AND CHANGE OUR WAY OF THINKING THE BEAUTY OF THIS WORLD AND ALL THOSE THAT INHABIT IT WILL BE GONE.

EXTINCTION IS FOREVER.

I strongly believe the fence which restricts elk at Tomales Point should be removed.

I have hiked in Pt. Reyes National Seashore for over forty years and prefer being surrounded by wildlife to passing through cattle ranches.

Please remove the ranchers who are bad stewards. If leases must be extended, only allow ranches which operate within the environmental guidelines. I'm particularly concerned about the the areas near Abbott's Lagoon and Drake's Estero; these two areas seem the most negatively impacted by pollution resulting from ranching operations.

While I understand the importance of local agriculture, I would prefer that the National Seashore do everything possible to protect and nurture wildlife rather than ranches. Please remove the fence and allow elk to roam.

Thank you.

Correspondence ID: 3260

Hello,

I want the National Park Service to implement Alternative B. The fence should be removed and never should have been there in the first place. Wildlife and their natural habitat shouldn't be expendable to the greed of special interests. It is appalling that the Tule Elk are prevented from

reaching their basic life saving resources of water and food in their own habitat. As a tax payer and California native who lived in the Bay Area and loved going to Point Reyes I want my tax money to go to the Tule Elk and not cattle ranchers, who cause so much suffering to even their domestic cattle as they rip away the cows's babies and all the trauma that causes. Please remove the fence and please remove the welfare cattle ranchers and dairy farms from these precious public lands. Thank you!

Correspondence ID: 3261

Completely in favor of removing fence. Can cattle and elk coexist?? If so great if not restrict cattle who can forage elsewhere. I would like if some elk were relocated to remote areas of state land. Ideally a enclosed valley similar to the one that saved the elk in the past. The fence had proven inhumane and actually tortured the animals before death. Lastly these elk breeding elsewhere could help the other species survive especially wolves now repopulating California.

Correspondence ID: 3278

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Thora Jorge

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Patricia Lee

Por favor, les pido que eliminen la cerca para los alces de Tule y les permitan deambular libremente. Estos alces ya se enfrentan a una amenaza suficiente a causa del cambio climático, la sed y la desnutrición, y tienen derecho a vivir con libertad en donde nacieron, en lo que es su verdadero hogar y, por tanto, les pertenece.

Les pido apoyo a la alternativa B que permitiría los alce vagar libres y también permitiría al NPS considerar la construcción de una cerca para evitar que el ganado de propiedad privada ingrese a Tomales Point. Pero las otras dos alternativas dejarían la valla donde está, y una de ellas permitiría al personal matar además a tiros al raro alce, lo que me parece una aberración y un crimen contra la maravillosa y necesaria vida silvestre en pro de unos intereses espurios.

Gracias

If I ever go to Point Reyes, it is because I want to see things like the Tule Elk. If I wanted to see cattle, why would I travel hundreds of miles south when I see cattle on my way to college at Cal Poly Humboldt, where I'm currently majoring in wildlife management and conservation. The problems you've had with Tule Elk are preventable by removing the elk fence. You wouldn't have to keep shipping them food and water during the drought, you wouldn't have had or needed the cull or deaths from starvation and dehydration because free ranging elk herds, can find food themselves. Economically that's what people go to Point Reyes to see are the Tule Elk, that's what I want to see at Point Reyes if I ever go there are the Tule Elk. By removing the elk fence, we wouldn't have to keep wasting taxpayer dollars year after year after year. The removal of the elk fence is the best thing the national park service can do to help tule elk because removing the elk fence is the most cheapest option, and considering how underfunded and undervalued wildlife management still is, we need that money to go into actual problems like protecting Snowy Plovers rather than waste on something that is completely preventable. Thank you for your time allowing me to comment.

Sincerely, John Marchwick.

Yes on Alternative B. Remove the fence that is killing the Tulle Elk. Stand up for wildlife! Thank you.

Correspondence ID: 3301

Both my wife and I love to visit our National Sea Shore in Point Reyes and the elk are a natural draw. We approve of the removal of the fence to help improve their survival.

Correspondence ID: 3302

This fence MUST be taken down asap. These Elk deserve a free roaming area as God intended!! Humans have taken their property and sold it to rich ranchers for cattle to be slaughtered. This scenario is all WRONG!! We can put the cattle behind the fence and let the Elk roam free. All animals were born free so let them be free!!

Correspondence ID: 3303

I am in support of the removal of the elk fence at Point Reyes. It would be much cheaper to remove the elk fence and allow elk at Point Reyes to be free ranging herds. Then we wouldn't have to keep wasting money sending food and water to their herd once they're free ranging and can do all of that themselves.

Correspondence ID: 3307

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Eva Schmelzer

Correspondence ID: 3313

Isn't it time to remove the fence already? Isn't it time to let the Tomales point herd roam free so they can find water and forage in order to avoid an agonizing and avoidable death? Ranching in PRNS has had it's day and they were supposed to be gone by now. It's now time to do the right thing and actually be proactive for the sake of the Tule elk. Why introduce that species in the park just to watch them die? It makes no sense but when there is money and influence to be had I guess there is no match. I urge the NPS to heed the call of the environmentalists and remove the Tomales fence/cage so there can be a healing going forward. Thank you for the opportunity to voice my opinion - I appreciate it.

Sincerely, Paul Dominguez(Marin County resident for thirty four years)

Correspondence ID: 3320

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I wholeheartedly support the National Park Service's choice, "Alternative B," for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore. Let's remove the fence and set the park's largest Tule elk herd free. Fences and confined animals don't belong in our national parks.

Furthermore, I kindly request the formal repeal of the current regulation in the General Management Plan that permits elk killing (referred to as "culling") in the other two herds. Once the fence is gone, herds may mix, making lethal "management" unnecessary and undesirable in our national parks.

Lastly, we can't truly ensure the freedom, health, and safety of the Tule elk at the Seashore until private cattle operations are removed. They expose elk to harmful fecal bacteria in the environment and cattle-borne diseases like Johne's disease. The NPS has itself acknowledged the presence of Johne's disease in the park's dairy ranches back in 1979. Private cattle operations should not have a place in our national parks.

I appreciate the National Park Service's willingness to consider public input on this vital matter. Thank you for taking the time to address these concerns.

Sincerely, Ken Kurtz

To Whom It May Concern,

As a resident and frequent visitor of Point Reyes National Seashore, I am writing to express my support for Alternative B and the removal of the elk fence within the Point Reyes Wilderness. I firmly believe that taking down this barrier is not only in the best interest of the elk population but also essential for the preservation and sustainable management of our park.

Over the years, it has become evident that the elk confined to the Point Reyes Wilderness area have exceeded the carrying capacity of the enclosed area. This has led to overgrazing and over-browsing, ultimately impacting the health and well-being of the land and the animals it supports. By removing the fence, we provide the elk with a chance to move freely, access vital resources, and ensure better management for a sustainable and healthy elk population. It is our responsibility to prioritize the welfare of these animals.

Allowing the elk to move without artificial constraints is not only essential for their health but also for the land itself. The natural behaviors of the elk, including their grazing patterns, play a crucial role in shaping the ecosystem. By removing the fence, we support a more balanced and sustainable approach to land management within the wilderness area. This will benefit the elk and the long-term health of the broader local ecosystem.

Modern wildlife management principles emphasize the importance of preserving biodiversity and natural processes. Removing the elk fence aligns with these principles, promoting a more natural and self-sustaining ecosystem. It is time to move away from outdated practices that restrict wildlife movement and embrace a more progressive and ecologically sound approach.

Visitors to Point Reyes National Seashore come to witness the beauty of nature. Removing the elk fence will enhance the visitor experience by increasing the opportunities to observe elk and other wildlife in their natural habitat. This will foster a deeper connection between visitors and the park, promoting a greater appreciation for its unique ecology.

While I understand the necessity of fences for ranching operations, I believe the responsibility for erecting and maintaining these structures should rest with the ranches themselves. The burden of managing and financing these fences should not fall on the park's resources or hinder its conservation efforts.

I acknowledge that removing the fence may impact the historical ranches in the area. However, I also believe that change can lead to progress. The preservation of our natural environment should take precedence, and we can work together to find solutions that support both our historical heritage and ecological conservation.

I understand that with the removal of the fence, water management for the elk population will become a crucial consideration. I trust that the park's experts will develop responsible and sustainable solutions to ensure clean water sources for the elk while managing their population effectively.

In conclusion, I ask you to consider the benefits that will result from Alternative B and the removal of the elk fence at Point Reyes National Seashore. This action represents a significant step toward preserving the natural balance and beauty of our park. It reflects our commitment to responsible wildlife management, ecological sustainability, and an enhanced visitor experience.

Thank you for considering public comments on this matter. I hope that, together, we can make the right choice for the elk, the land, and the future of Point Reyes National Seashore.

Sincerely, D. Shideler

Correspondence ID: 3334

Dear National Park Service,

Here is an opportunity for you to be on the right side of history. You can do this by supporting "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point, correcting a 45-year mistake.

The Tule Elk Reserve fence has long been a contentious issue, as it has restricted the natural movement and habitat of the majestic Tule Elk population within the Point Reyes National

Seashore. It is disheartening to see these magnificent creatures limited in their ability to roam freely and thrive in their native environment.

These cattle ranches are private companies and do not belong in a national seashore. The agreements that allowed the cattle ranchers to be there in the first place expired, and the original deal to leave should be honored so that this national treasure can be restored to its full former glory and not be overrun by waste from these ranches polluting the land that the intention was to be protected. But until this happens, removing the fence is the most compassionate thing we can do.

Thank you for your time.

Correspondence ID: 3335

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

The future of this planet is in peril. These incredible animals are being pushed to the brink of extinction by the human race. We should be ashamed for our lack of urgency and action to change the future. This is our last chance.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

I support Plan B: the NPS plan to take down the elk fence in Pt Reyes National Seashore

Thank you

Correspondence ID: 3338

I write to express my UNQUALIFIED SUPPORT FOR THE REMOVAL OF THE ELK FENCE within the Point Reyes National Seashore. While I appreciate there are many conflicting views about this issue and that good people can disagree on important issues, the bottom line is that the elk as a native species have a right to thrive. The mass die offs we have seen because of drought and limited grazing due to the fence is deleterious to their health and stability as a local native species.

Correspondence ID: 3339

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, mr John Berkland

I am a resident of Coastal Marin. I have commented before and continue to follow the standoff between the "environmentalist" and the "agriculturalist (ranchers, dairy and farmers)". I consider myself an "active" environmentalist. However, that would not accurately identify me as being on

one side of the fence (if you will) regarding this concern. I appreciate the great value that the historical agricultural practices and community in the area of concern have. I value small ranches, dairies and farms. We desperately need these established, knowledgeable, skilled people who provide us with food. Like the rest of the country if not the world, practices do need ecologically thoughtful improvement. The Park Service would serve all of us well by providing a determined adequate space for the (seasonally changing herd size of) Tule Elk and helping the ranchers, dairies and farmers update and improve practices to meet the needs for all of the various interests.. elk, people, visitors alike.

Thank you, Joanna Moore

I am pleased that the NPS has chosen Alternate B as the proposed action for the Tomales Point Area Action Plan. Alternatives A and C are unacceptable to me because they would continue to inhumanely confine the Tule Elk on Tomales Point. The Tomales Point Elk Herd should be able to freely roam about the Point Reyes National Seashore for mineral-rich forage and water. Several die-offs during recent periods of drought have reduced the Tule Elk herd from 465 to the current total of 262. The Elk should not be trapped behind an 8 foot fence and left to die of starvation and dehydration. Once the Elk fence has been removed, cattle fences should be installed that allow Elk to cross back and forth into the Wilderness Area but prevent cattle from doing so. People visit the Point Reyes National Seashore and Tomales Point to enjoy the magnificent views and to see the majestic Tule Elk. People do not visit Point Reyes to view commercial cattle ranches and a landscape degraded by cows.

I have the following suggestions regarding improving visitor experiences for the Tomales Point Area Action Plan:

The Pierce Point Ranch area should be improved to include a visitor center comparable to the existing Bear Valley visitor center. Tomales Point has become a very popular destination for visitors and the parking area should be significantly enlarged in anticipation of increased use. In addition, bathrooms with running water and flush toilets should be added rather than primitive vault toilets without water. The Bay Area population will continue to increase along with tourism and the NPS should incorporate improvements to accommodate this expected increase.

The NPS should also develop more hiking trails in addition to the proposed viewpoint spur trail. Currently, there are only two heavily used trails to Tomales Point and McClures Beach. There are no maintained trails to the beaches and coves along Tomales Bay in the Wilderness Area. Day hikers and campers must make their own way to these popular beach and cove destinations, degrading the landscape with shortcuts and multiple unmaintained routes. Permitted camping along Tomales Bay using a site based registration system like the system used in the Bear Valley area should be developed.

The NPS has determined to improve visitor use management for the Tomales Bay beaches and coves and should create and maintain access trails from the Pierce Point visitor center and from along the Tomales Point trail. Camping and picnicing areas should also be improved to enhance visitor enjoyment of the Tomales Point Wilderness Area.

I appreciate the opportunity to comment on the proposed Tomales Point Area Action Plan and look forward to a Plan that removes the existing Tule Elk fence and improves infrastructure for visitor use.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dennis Tackett

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Stacey Mazza

*Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Gina Weyant

I would like to express my support in the proposal to remove the fence for Tomales Point elk and allow them to once again roam free (Alternative B). The Tomales Point's elk must be preserved in a manner that protects that population's health, safety and ecological integrity. Alternative B would allow the elk, currently in a 2,900 acre area of poor forage known as the "Preserve," to finally roam free. It also would allow the NPS to building a fence to keep privately-owned cattle from entering Tomales Point. These changes must be made to insure the survival of this herd which previous plans failed in not taking into consideration environmental conditions such as drought and lack of proper foraging for this herd to maintain the necessary resources to remain healthy and flourish evidenced in the deaths of 153 elk from that herd. I wish to thank you in

advance for doing all that is possible to insure this herd be given all it needs to once again become a symbol of a thriving Tule Elk herd.

Please get rid of the Elk Fence. The Tule Elk deserve a larger range and more resources. It would be great to remove ranching from that area too but that's a whole different petition. Please give the elk what they need which is more space to roam, eat, drink and reproduce!

Correspondence ID: 3437

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Cristina Juare

People throughout this country have asked, pleaded and demanded that you remove the fencing and kick livestock off our public lands so that the Tule elk can eat, drink, not starve and live in peace.

We have seen more than enough of these elk dying because they are cut off from food/water so that ranchers can graze their livestock.

Remove the fencing, get livestock out, listen to the majority and protect the Tule elk instead of special interests.

Dear National Park Service -

I strongly support your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I would like to see these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Thank you.

Jessica Seaton

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Susan Edelstein

Correspondence ID: 3468

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, John Marro

Please take down the fence and allow the Tule Elk to access water. These are public lands being controlled by private cattle ranchers through the NPS. We need to respect wildlife and let them live. Tax payers like myself want the lands to be used wisely not for a few persons profit and for all the wildlife to be allowed to live.

Correspondence ID: 3479

Correspondence ID: 3482

Please remove the Tule Elk Fence at Tomales Point within Point Reyes National Seashore.

For decades, this fence has led to significant suffering among the Tule elk population, resulting in the deaths of hundreds due to inadequate access to water and suitable forage, as documented by the National Park Service.

Additional measures to safeguard the elk should be implemented, such as the removal of all cattle from Point Reyes National Seashore. Tule elk can be vulnerable to diseases transmitted through contact with manure from these domestic animals. Preserving the park's natural resources should be the paramount responsibility of the National Park Service.

Correspondence ID: 3483

Correspondence ID: 3500

Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 3501

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Katharine Huseby

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Please remove the fence that is keeping the Tule elk from roaming free and allowing them access to good food. No animal should starve when good food is available to them. Keep these magnificent animals free and well-nourished.

Thank you for your attention to this comment.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence now - and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially RESCIND the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I OPPOSE all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to FECAL BACTERIA in soil, streams, and ponds, and manure-borne, CATTLE DISEASES including Johne's disease. The NPS itself cites a 1979 study that found half of the park's DAIRY ranches were infected with JOHNE'S disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Why were national parks set aside?

Since cows are our main priority now, they must have been set up for cows, right?

Are cows now the new 'wildlife' we are supposed to be protecting. It sure isn't the rare Tule Elk, by the way you all are standing by while they die of thirst.

Try going 6 hours without some thing to drink. Better yet, my suggestion is that all of you go without anything to drink for 5 days.

Sincerely, Mrs. SHARON KOESTER

*Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 3526

I have been involved in the protection, and following the fate and welfare, of the indigenous and artificially-confined Tule elk population at Pierce Point since the 1990s.

The NPS was trying to humanely "manage" the herd in the 1990s and the early 2000s, but subsequently succumbed to pressure from the cattle ranchers renting space on the national seashore lands to extend their ranching leases and to forcibly contain the elk, to disastrous detriment, while also allowing for the expansion in the breadth and scope of their livestock operations. This decision was a travesty, despite prodigious pleas from the public to expand the land for the Tule elk.

I am heartened that the NPS has now put forth a proposal to remove the fence and open additional lands to the Tule elk herd, and to further efforts to restore native plant life to the region.

I want to emphatically advocate for the adoption of the NPS's Proposal #2 to remove the fence that has cruelly entrapped the Pierce Point Tule elk herd, along with the environmental stipulations of the proposal.

It is time that the NPS places the protection and preservation of the lands and the indigenous wildlife populations, as well as that of the indigenous Native American cultural lands, as the top priority. It is a win-win for the natural ecosystem, native Californians, and the public welfare.

Adopt proposal #2!

Barbara Lapidus

Petaluma, CA.

Correspondence ID: 3528

Dear National Park Service,

I agree we should remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. It is inhuman to do otherwise.

In addition, we should do something about the pollution from the Commercial cattle operations.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Rhonda

Correspondence ID: 3529

I agree with Plan B, please remove the fence.

Are cows valued over Elk because they are a money crop?

Correspondence ID: 3530

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

BUT THIS DOES NOT GIVE YOU THE RIGHT TO SHOOT THEM.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 3532

I am deeply grateful for the NPS preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978). It is long past time to allow our Tule Elk to move freely to water and food resources inside Point Reyes National Seashore.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

And ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

The presence of private commercial interests on public land should not privilege commercial concerns over the care and keeping and rewilding of public wild spaces.

Please enact "Alternative Plan B" and remove the Tule Elk Reserve fence at Tomales Point.

Thank you.

Dvera Hadden

Correspondence ID: 3533

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks. I worry a lot about these majestic creatures!

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Cinzia Moore

*Dear National Park Service, I agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

BUT THIS DOES NOT MEAN YOU CAN SHOOT THEM!

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Stop being so cruel and TAKE DOWN THE DAMN FENCE!

Correspondence ID: 3549

I visited Point Reyes National Seashore, including Tomales Point, last year for a wildlife watching holiday. Tule elk were one of the species I was very keen to see. I was horrified to see many areas of the reserve with cattle on what are supposed to be protected public lands. Cattle have a negative impact on the habitat and biodiversity and contribute to climate change. I think the Park Services should do more to remove cattle from the reserve as they have the obligation to protect the natural resources of the park. Tourists must bring many dollars to the region and we don't want to see degraded habitat and cattle when we visit.

I understand that there is a chance to remove the fence at Tomales Point, I think that this would be a great idea to give the Tule elk a chance to roam freely. Many animals have died due to lack of food and water as they are trapped behind the fence. So please remove the Tule elk fence at Tomales Point in Point Reyes National Seashore.

Correspondence ID: 3550

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Michael Carroll

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Greg Moore

Correspondence ID: 3575

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I have been an animal advocate for decades and I'm writing in support of the National Park Service's (NPS) preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the Tule elk. Fences and confined animals have no place in national parks.

I also request that you officially rescind the current regulation in the General Management Plan allowing the culling of elk in the other two herds since herds may intermingle when the fence is removed. I oppose ALL lethal "management" of any and all wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until cattle operations are removed. The feeding of cattle exposes elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases. The NPS itself cites a 1979 study which found half of the park's dairy ranches were infected with Johne's disease (a disease that affects cattle). Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting public comments on this critical issue. I will always support our beloved wild animals and the land that is rightfully theirs.

Sincerely, Lori Rumpf

Correspondence ID: 3576

Elk are free roaming animals. They should be allowed free movement to forage and find drinking water. Environmental freedom is a must for these native animals.

Correspondence ID: 3577

I read about the number of Elk who died through dehydration and starvation during the extreme

droughts in the area. The poor animals were contained behind that fence and left to die. That was inhuman, and not worthy of a great country. Rescuers even attempted to provide water supplies for the elk, but there was no compassion from yourselves, and many elk perished. That is an indictment on your agency. It would be superior if the cattle were curtailed, as the self interest of the farmers would ensure they were provided for, whereas the poor wild elk are ignored as collateral damage. I would expect more compassion from your organisation. Please consider my comments in your forthcoming policy decisions. Ann Garner. UK.

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Brenda Robinson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I am an attorney in Washington State and I am a former chairperson of the Washington State Bar Association's Animal Law Section. My comments are my own and do not reflect the views of either the Bar Association or the Animal Law Section.

I am writing to state that I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

I have been practicing law for nearly 40 years and over that period of time I have seen a dramatic and disturbing change in the way the government operates. Governmental agencies now appear to be working for private, for-profit interests rather than working for the public.

Those with money hire K Street lobbyists to make sure that Big Business interests are “protected” by the government. Why is the government working for private interests to the detriment of the public?

I want the National Park Service to officially rescind the current regulation in the General Management Plan allowing killing (euphemistically referred to as “culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks. The NPS has absolutely NO BUSINESS acting as advocates for private cattlemen and their professional organizations. The NPS fence has been responsible for the deaths of hundreds of elk in recent years. There can be no doubt that the decrease in trust in the government by Americans is fundamentally related to the government's “protection” of private, for-profit businesses.

Sincerely, Mrs. Cheryl Mitchell

I am in support of Alternative B which remove the elk fence while limiting cattle. I am in favor of slowly phasing the cattle operations out of the park which I realize will not likely occur in my lifetime. I still feel that the elimination of the oyster farm was unnecessary and counterproductive given the overall situation.

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

I hope the National Park Service will take the proper steps to protect the natural resources of the park.

This is truly one of the most beautiful and wild places we have in the U.S. We are so appreciative of your services and I have supported both the National and California park service for years. Your mission is everything! Please help the Tule Elk.

Thank you,

Erika

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I STRONGLY SUPPORT the National Park Service's PREFERRED "ALTERNATIVE B" FOR THE Tomales Point Tule Elk Reserve at Point Reyes National Seashore, TO FINALLY REMOVE THE FENCE AND FREE THE PARK'S LARGEST HERD OF TULE ELK. FENCES AND CONFINED ANIMALS HAVE NO PLACE IN ANY NATIONAL PARK UNITS.

In addition, PLEASE OFFICALLY RESCIND THE DURRENT REGULATION IN THE General Management Plan ALLOWING KILLING ("culling") OF ELK IN THE OTHER 2 HERDS SINCE herds may intermingle when the fence is removed. I STRONGLY OPPOSE ALL LETHAL "MANAGEMENT" OF ANY WILD ANIMALS IN ALL OF OUR NATIONAL PARKS.

Finally, the Seashore's Tule elk CANNOT BE free, healthy, and safe UNTIL ALL PRIVATE CATTLE OPERATIONS ARE REMOVED BECAUSE THEY EXPOSE ELK TO fecal bacteria in soil, streams, and ponds, AND manure-borne cattle diseases, INCLUDING Johnne's disease. The NPS itself cites a 1979 study that found HALF OF THE PARK'S DAIRY RANCHES WERE

INFECTED WITH Johne's disease. PRIVATE CATTLE OPERATIONS HAVE NO BUSINESS IN ANY OF OUR NATIONAL PARKS.

I THANK THE National Park Service

FOR FINALLY REQUESTING AND CONSIDERING PUBLIC COMMENTS ON THIS VERY IMPORTANT ISSUE.

Sincerely, Dr. Mark Feldman

Correspondence ID: 3620

I am writing to express my support for your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. I believe that this is the best course of action for the elk and for the park as a whole.

I believe that the removal of the fence would allow the elk to thrive. They would be able to move freely throughout the park and access the resources they need to survive. This would also benefit the park's ecosystem as a whole.

Once the fence is removed, it is important to take steps to protect the elk from exposure to cattle diseases. This could be done by providing the elk with access to clean water and by monitoring the health of the herd.

I also believe that it is important to hold ranchers accountable for any harm they cause to the elk or other wildlife in the park. This could be done by increasing fines for hazing or harassment, and by making it easier for people to report violations.

Thank you for your consideration of my views. I urge you to move forward with Alternative B and to remove the Tule Elk Reserve fence and all private cattle ranches from Point Reyes National Seashore.

Thank you.

Correspondence ID: 3621

I am writing in support of Alternative B. I believe the ethical and moral thing for the National Park Service to do is to remove the fence which restricts the movement of the Tule Elk. These animals are precious and nearing extinction. To continue confining them to Tomales Point where they lack adequate forage and water is criminal in my opinion. Once the elk are gone, they will be gone forever. Please do the right thing and protect the Tule Elk. Put into effect Alternative B.

Thank you.

Laura Barnett

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ray Yow

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Sandi Hefner

Hello NPS:

I am a regular visitor to Point Reyes. I visit every week except in steady rain and mostly I am around the Limantour Road area. Sometimes I see the Elk herd and I am happy to see them. They are lovely creatures.

I started seeing the Elk on my first visit to the park thirty five years ago. Now in my 80s I look forward to the Elk all being allowed to road free in the park. I believe the ranchers need to relocate.

Yours,

Paul Goodberg

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, A Davis

I am a wildlife photographer and have photographed through out the US, Canada, and Central America for over 20 years. The Tule Elk are an important part of Pt Reyes National seashore and deserve to be protected. Grazing cattle are not part of the native species and cause polluted water, destruction of native plant species, and can pass diseases to the Elk. Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Larry Moskovitz

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Rich and Eileen Heaning

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Shana Collett

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Summer Dehlitsch

*Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating

the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Mimi benadiba

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Dr. Deborah Krupp

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

It is quite possible the Tule Elk may be decedents of the Tule Elk from the Panama Exhibition.

What kind of people would not protect God's most innocent children? It is our responsibility to care for life. It is wrong o abuse sentient lives to death as the National Park Service has done for a very long time.

Have you lost you moral compass?

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Donna Zoll

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Jordan Neiman

Further protections for the Tule elk and other wildlife inhabitants should be administered including the removal of all cattle and the elk fence in Point Reyes National Seashore. It is the National Park Service's obligation to protect the natural resources of the park above all else.

It seems antithetical to have allowed commercial ranching to remain in a newly created National Park which was created to “preserve unimpaired the natural and cultural resources” of this land. The continued destruction of such a beautiful natural habitat from its original intended purpose too is shocking. The invasiveness of the continued ranching activity not only upsets the natural life form balance of all its flora and fauna, Fencing, pollution, contaminants, all add additional negative stressors to the natural balance of this seashore habitat. These stressors cause unnatural behaviors among various living organisms, including birds, animals, waterlife, and even plants as they all struggle to adapt to an abrupt and artificial change to their natural

environments. This type of stress can affect eating, migration, and reproductive cycles. Restricting and altering a species natural biodiversity may not be very obvious at first, but over time the “herd” gets weaker, dumbed down, unnaturally mutates and, in worst case scenarios disappears. I'm sure that this is not the intended result of this situation. But, it's the unintended consequences that need a closer examination. If you do not do this, who will?

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Birgitta Granholm

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Eric Naji

I was raised in California, and wholeheartedly agree with the National Park Service proposal to remove the elk reserve fences. Those fences do not benefit the public, only the ranchers. Wildlife belong in a national park, livestock do not! Extending leases to commercial beef and dairy operations at the Seashore is wrong at many levels, most notably the grazing rights contingency of no contamination shows an outright dismissal of the contingency by commercial cattle operators. The pollution that results from commercial livestock operations is unacceptable. Science proves that manure and urine destroy the environment and streams that empty pollution into the ocean. Livestock operations are toxic and incredibly damaging to wildlife and the public. No new leases should be granted. Phasing out the leases for all remaining dairy and ranch cattle is necessary. As each cow dies it should not be replaced, shrinking the herds to zero asap. Blocking public access for the public in favor of commercial livestock producers is unconscionable. Polluting our fragile environment for profit is evil. Greed is threatening our planet, harming wildlife, and holding the public hostage. California is better than this!

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Suzanne Zimmer

Correspondence ID: 3958

Dear National Park Service, I agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 3959

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and

manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Jill Kaptur

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, stella makridis
