

The Not So Amazing Raindrop

All living things must have **fresh, clean** water.

Unfortunately, in this modern world, our streams and lakes are often polluted by factories. Trash is dumped into once-clear streams. Acid rain, caused by pollution from factories and cars, contaminates lakes and rivers. No insects, fish, frogs, or ducks can survive in these polluted areas. Animals cannot drink the water. Plants die.

Color the picture. Use lots of brown. Don't you wish you could use green instead?
