

TABLE 22. Comparison of 1.25 years of cover growth (dm^2/m^2) in two habitats of *H. helix* from a completely randomized design experiment

Characteristics	Habitats	
	upland	flood plain
No. m^2 plots	10	8
Standard deviation	18.6	12.9
Mean dm^2/m^2	82.4	15.4

t test: $t_{16 \text{ df}} = 8.631$; significant beyond 0.001.

Variance ratio: $F_{9/7 \text{ df}} = 2.082$; not significant at 0.1.
