

TABLE 26. Flood survival of *H. helix* on the flood plain in dm² of cover per m² by a paired (in time) plot (1 × 1 m) survey design replicated seven times

Characteristics	Observations	
	25-28 July 1972	26-29 April 1972
Standard deviation	24.4	3.6
Mean dm ² /m ²	33.7	97.6

Paired plot design: Modified $t_{6,df} = 6.865$; significant beyond 0.001.

Variance ratio: $F = 46.687$; significant beyond 0.001.
