

TABLE 4. Comparison of cover dominance in dm^2/m^2 of *Hedera helix* in two habitats from a simple random sampling design survey

Characteristics	Habitats	
	Upland	Flood plain
Observation dates	3/31/71	4/1-5/71 and 22, 23/71
No. m^2 plots	30	28
Standard deviation	1.0	2.7
Mean dm^2/m^2	99.7	98.7

Modified t test

$t' = 1.904$; significant at 0.1 (Snedecor);

$t_{34 \text{ df}} = 1.904$; significant at 0.1 (Satterthwaite).

Variance ratio: $F_{27/29 \text{ df}} = 6.906$; significant variance beyond 0.001.
