

TABLE 73. Comparison of vigor of *L. japonica* in cm² of green and chlorotic cover per dm² to degree of shading in number of layers of cheesecloth from a randomized block design experiment replicated three times

Characteristics	Treatments				
	96 layers	48 layers	24 layers	12 layers	0 layers
Standard deviation	14.4	12.7	14.4	10.1	16.7
Mean cm ² /dm ²	8.3	13.7	33.3	76.3	85.0
Duncan's 10% test	_____		_____		_____
Duncan's 0.1% test	_____		_____		_____

Note: see Table 2 for note regarding Duncan's test.

Analysis of variance: $F_{4/8 \text{ df}} = 17.424$; significant beyond 0.001.

Bartlett's: $\chi^2_{4 \text{ df}} = 0.536$; no significant variance at 0.1.
