

Point Reyes National Seashore
Tomales Point Area Plan
Public Scoping
May 2024
Comment Letters 1–2,000

Correspondence ID: 1

I am in favor of the proposal to remove the Tule Elk fence. I agree with the proposal as written. As a long time hiker in the Point Reyes area and Tomales Point in particular, I have observed the drying of the water sources that serve the Tule Elk and I support the need of removing the fencing that has contributed to the death of hundreds of Tule elk in this area. Tule Elk are an important indigenous animal to the Point Reyes area and it is the responsibility of the National Park Service to support them for the good of the public and the fulfillment of the mission of the National Park Service.

Correspondence ID: 2

Although I recently moved away from the Bay Area after living there for over twenty years, the lands and wildlife of PR. Reyes are very near and dear to my heart. I am both gratified and alarmed to read the options in the new proposed plan. It is a promising to see that Option B removes the fence confining Elk. However, Options A (ongoing confinement) and C (active herd “management”, including killing of EI as deemed necessary for population control) are disappointing and completely unacceptable.

The history of the Tule Elk described in the newsletter is one of being hunted to near extinction, enduring forced relocation and confinement, contending with life-threatening droughts, and then experiencing sporadic killing when herds becomes too strong for the limited territories they have been granted. In human terms these animals would be considered refugees, prisoners, and survivors of a series of traumas including genocide. How can any of these “options” still be on the table? The only reasonable way forward is to recognize the harms we have done and try to prevent further harm by removing the fence and allowing the Elk to do what they do best, find resilience and try to thrive.

Correspondence ID: 3

We appreciate the wildlife--that is, elks--at Tomales Point. There is plenty of other land in northern California for raising cows. Please take down the fences that are corralling and starving the elks!

Correspondence ID: 4

Please restore this to a Wilderness-like area. NO fencing, no cattle. Allow the Tule Elk (and all wildlife) to migrate and move as they need with plenty of access to water, etc.

Correspondence ID: 5

Please remove the fence and free the elk. We should not sacrifice wildlife for the sake of private profit, particularly for a handful of extremely wealthy and environmentally destructive ranchers.

Correspondence ID: 6

Pull down that fence! Let the wildlife graze Tomales Point.

Cattle belong on ranches, not public lands.

Correspondence ID: 7

Of the 3 proposals in the Tomales Point Area Plan, I prefer alternative B, especially removing the fences excluding elk from various areas on the point.

I believe that the plan should go further in preventing cattle interference with the elk herd by terminating the dairy leases as soon as legally possible.

I agree with removing the additional water sources that have been added over the years for the elk, and allowing selection pressure to limit the population. HOWEVER, the natural watershed has been seriously disturbed, and as part of removal of supplemental water, and some cultural resources, I believe that some watersheds may require restoration to allow pre-1769 ponding and accumulation of rain and fog sources of water.

I don't agree with the thinking that it is important to maintain dairy ranching in the study area as a historic practice. That time has come and gone. There are other dairies in west Marin. It is far past time that the smelly and polluting intensive dairy ranching be terminated within the GGNRA Point Reyes Seashore area.

Do not exclude the elk from any of the areas on Tomales Point where they were found prior to 1850 (and prior to California ranching going back even further).

Correspondence ID: 8

Please, please, please — ALTERNATIVE B.

NO MORE ELK FENCE!!!

This national Seashore belongs to us, not a small group of politically-connected ranchers.

THANK YOU!!!!!!

Correspondence ID: 9

Kudos to NPS for this important planning process and work.

I strongly support Alternative B, the NPS proposed action. It would be most consistent with protecting park resources and natural values. The tule elk should be allowed to roam free and not be managed like cattle. The wilderness should be left alone except for eradication of harmful invasive species. Domestic livestock should be completely excluded.

Please continue this excellent work.

Many thanks!

Correspondence ID: 10

While I appreciate a public comment period over the future of “our” park, I wonder what the point is as it appears that the “fix was in” from the start, and the parks future seems to have been predetermined by our congressman and special interests (ranchers and anti-public land advocates) from the start. The people of West Marin who, 40+ years ago, fought to prevent ranchers from selling their farms to developers and to... “Preserve, for purposed of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped” (Public Law 87-657), must feel more than a little bit betrayed.

So, what would I like to see? A Park! An actual National Park. Wild, natural open space (no fences) as it was before ranchers, the gold rush or even Sir Frances Drake. No more “Poop Ponds”, rancher trash dumps, illegally dumping of logs by local tree removers in park ranches, erosion damage, cattle runoff in our local salmon and steelhead freshwater streams, and culling of pregnant elk!

Correspondence ID: 11

I support Alternative B. I'm definitely against Alternative A (No Action). Alternative C looks better than A, but looks questionable compared to B.

I believe Tomales Point (and all of Pt Reyes) deserves ongoing conscientious management. Climate change and increasing visitation are intense pressures. The NPS should feel supported to embrace its role to respond to these ever-evolving pressures.

I've seen other treasured beautiful places suffer degradation due to climate change and increasing visitation. I know this degradation is real, and always threatens to get worse.

I support three broad goals, which I think are well-addressed in Alternative B, in order of priority:

- 1) There are many places in the Planning Area where no sign of human presence should be visible. Trails, campsites, etc, should be discreet in their visibility.
- 2) Places modified for human presence (roads, parking, Ranch, trails, campsites) should be maintained and upgraded, to earn visitor respect and admiration for NPS's caring stewardship.
- 3) Tule elk population should be stable over the long term. I enjoy seeing yule elk wherever I am in Pt Reyes. I don't understand all the issues involved. I tend to favor making all of Pt Reyes open to tule elk. I tend to not favor tule elk in limited areas where close and more intrusive management might be required.

I first visited Pt Reyes over 50 years ago, and have hiked there more times than I can count. I've hiked from most of the trailheads. It's impossible to pick out a favorite part of Pt Reyes. It is like a tiara with so many different precious jewels in it. But Tomales Point is definitely for me the most mystical part of Pt Reyes. Thirty-plus years ago, I hiked from Pierce Ranch to the very tip of Tomales Point and back in one day (getting back well after dark). That hike shines brightest in memory.

Correspondence ID: 12

Hello,

Thank you for the opportunity to comment on the proposed plans. I prefer Option B with the following exceptions:

1. I would prefer that supplemental water supplies & minerals continue to be provided to the elk at least in the initial few years after the removal of the elk fencing to enable them time to find new water sources on their own. It may take some time for them to realize that their enclosure has been removed.
2. I am in favor of removing non-native plant species but am totally against the use of herbicides.

3. I am in favor of installing a cattle fence to ensure only the elk have access to their original habitat.

4. I would like to request that the new parking and toilet facilities not be overbuilt in such a way that too many visitors use the area and ruin its character. I am in favor of restricting access by permits, etc.

5. I am not in favor of “controlled burns” to manage the site. They frequently get out of control. Instead, if weed management or shrub management is needed, I recommend using goats.

Also, what I really like about Option B is:

1. Collaborating with native groups to ensure that their tribal customs can continue and/or be reinstated.

2. It would allow the elk herd(s) to naturally exist. They are beautiful, spirited animals and contribute greatly to this magical area.

Thanks for your consideration of these comments.

Susan McCutchan

Correspondence ID: 13

I support the removal of the fence that currently restricts the Pierce Point herd. The park must prioritize the welfare of all wildlife. Removing the fence is a great first step. The next step would be removal of ranching and dairy operations in our national park. As a tax payer, I object to the continuation of private enterprise that has no relation to park activities (hiking, birding, and elk observation, etc.) and in fact contributes to the degradation of the coastal prairie ecosystems at Point Reyes.

Sincerely, L. Stanziano

Correspondence ID: 14

Remove the fence. Let Tule Elk roam free.

Exclusion fencing for incompatible uses (e.g. ranches) could be permitted, provided that the free-roaming elk have open access to drinking water, and to ample summer and winter habitat, for all of their biological needs.

Correspondence ID: 15

I support alternative B. The fence should come down and the elk range should be allowed to expand. Wildlife and visitors should be favored over ranches in the management plan.

Correspondence ID: 16

I firmly support Alternative A which would continue the current management practices at Tomales Point for the tule elk. 150 years ago, our great State agreed to protect these elk and we must continue to do so. In a perfect world, it would be great if these elk could roam freely without fences in their way, but the reality is that the fence ensures them the protection in a space of their own, along with access to consistent, lifesaving supplies of water, especially in times of drought.

The elk are at our mercy and I believe that Alternative A, continuing to manage the elk with a fence and a supply of water is the most HUMANE option, and one that is true to our State's 150 year old tradition of protecting these animals.

Correspondence ID: 17

I support Alternative B: Unconfined Elk Herd, I also support the expanded involvement of indigenous scientists and local Coast Miwok organizations such as the Alliance For Felix Cove in formulating stewardship policies. I believe that their ecological expertise is invaluable in making decisions about the long-term health of the ecosystems in the park.

Correspondence ID: 18

We're writing in support of alternative B, removing the fence and allowing the elk to roam the park.

Correspondence ID: 19

Please remove the fencing, stop killing the Tule elk thro starvation, honor the original plan to end the land use for local dairies that are currently destroying the vegetation and polluting the water.

Correspondence ID: 20

Regarding Point Reyes National Seashore: I believe that our public lands should primarily be used to protect scenic areas, endangered lands and wildlife and allow people to experience them. Other activities such as cattle grazing can be allowed but should have a lower priority than the primary objectives. So I like the proposal that eliminates the fence and the 12 other barriers that keeps the Tule Elk herd in one section of the park. Allowing the different herds to intermingle creates a more diverse gene pool within the herd. And proper grazing, even with cattle (rotating grazing areas and not overgrazing an area, something wild herds without fences do naturally) is good for an environment and allows native grasses to thrive. I am also in favor of using Native Americans traditional knowledge to help restore our lands.

Correspondence ID: 21

Please remove the fence and free the elk. We should not sacrifice wildlife for the sake of private profit, particularly for a handful of extremely wealthy and environmentally destructive ranchers. Thank you

Correspondence ID: 25

I have been so saddened by the abuse of the tule elk in point Reyes. They are so beautiful and it's such a joy to see them when driving through that area. I know many many people who love seeing them as well. I am a hairdresser in the local community and people often share with me their opinions on how much it means to them to see you to lay out out there, please , please stop prioritizing the cattle industry and let our natural native animals share the planet. The

greed and the money is out of control. Let these beautiful animals roam and feed and drink, and carve out a niche for them.

Sincerely, Gail Salvador.

Correspondence ID: 26

Hello!

I am a huge supporter of our national parks to support wildlife over cattle. The Elk have few homes. Please remove the fence, and keep closing down the dairy farms. It is our heritage.

Ken Gorczyca, DVM

Correspondence ID: 27

I am in Favor of Plan C

because it recognizes the need to control the elk population rather than drive the ranches out of business.

When the park was formed they were given a legal right to remain. Bankrupting them by allowing the elk to eat the forage on the ranches is wrong. If you plan to drive them off the land, they should be compensated in a transparent way, not bankrupted in an underhanded way.

Control the elk, if necessary by allowing native Americans to hunt them and distribute the venison to those in need.

Correspondence ID: 28

I support Alternative B! Take down the fence. Prioritize wildlife over commercial ranching.

Correspondence ID: 29

Please prioritize the health and free roaming of the tule elk; they are a local treasure and deserve our accommodation and respect. The wildlife at Pt. Reyes, including the tule elk, should be the priority over ranching and other commercial uses of the land.

Correspondence ID: 30

this is a test.

Correspondence ID: 31

Time to become a true National Park that adheres to the stated mission: "preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations." The tule elk should not be impaired by being fenced in like a zoo but allowed to roam their traditional grounds. Time for the NPS to kick out the cattle grazers and dairy farms and return the land to its' natural and historic environmental state, before the farmers moved in.

Correspondence ID: 32

Take the fence down but make sure the ranchers don't shoot them. Around here it is "shoot, shovel and shut up". Don't let that happen to the elk. Make sure they have water, expand the Pierce Point visitor center. Frankly, in my opinion, get ride of the cattle and the ranchers. Is it a national park or not?

Correspondence ID: 33

I would recommend that the area be returned to its natural state and that cattle be removed allowing the elk and other native species to prosper in the area.

Correspondence ID: 34

Fence cows, let elk have the ability to roam. Those dairies should be phased out. It is a national park and there are many other places where cows are managed for meat and milk.

Correspondence ID: 35

Please take down the fence!!! Let the elk roam free. They were there first!! Help them survive. Get rid of the cow farms There are a million places in the rest of the United States for them to raise cattle. This is precious ocean shore on which so many other animals depend. The government bought the land many years ago and the government has no obligation to maintain these farms. We do not want the farms either. They pollute the water and land in so many ways. This is a special piece of land. Also, this is a native habitat for the Elk. They have priority. Humans do not. I want to see the land restored to as much as its original state as possible. So REMOVE THAT FENCE! ELK-YES! FARMS-NO! DO NOT WANT FARMS THERE. GET RID OF THE FARMS. Its that simple.

Correspondence ID: 36

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes.

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Correspondence ID: 38

After reviewing the plan, I support removal of the fence that confines the Tule Elk and coordination with the Federated Indians of Graton Rancheria to incorporate traditional ecological practices.

I strongly oppose retaining the fence, allowing lethal removal of the Tule Elk and denying them supplementary water. This is inhumane when the animals have no chance against the hunters.

Correspondence ID: 39

Correspondence ID: 41

Please protect the tule elk in Tomales Point in the Point Reyes National Seashore!

After reading about the three choices for the elk, by far the most humane and environmentally healthy solution is for the elk to run as free as possible. So - I choose the Seashore's second proposal removing the fence and keeping cattle away from the point. Way way overdue action! All the other ideas in this proposal sound healthy and far-thinking. Please choose for wilderness, the elk, the environment and NOT the cattle ranchers: cattle can easily be raised many places. Not so the tule elk.

Thank you, Gail Raborn

Correspondence ID: 42

I support Alternative B as the best alternative presented.

Correspondence ID: 43

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternative.

Correspondence ID: 45

As a fourth generation native of Petaluma, local historian, and descendent of dairy ranchers extending back to the 1860s in the area, I am strongly in favor of the proposed Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area. I'm especially encouraged by the involvement of the Graton Rancheria tribe in helping steward the land.

Correspondence ID: 46

I am strong in favor of the proposed Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area.

Correspondence ID: 47

Take down fence. We humans have destroyed killed enough wildlife, some endangered, some extinct.

Correspondence ID: 48

Knowing that tule elk are capable of swimming great distances, can you explain why they have not expanded beyond Pierce Pt. already and why you don't feel expansion to the "mainland" of Marin county is likely with removal of "the fence"?

It might be prudent to collar a few , most likely to disperse individuals (sub-adult males and/or anti-social or rejected females) from the Pierce Point herd to explore the potential for future conflicts with West Marin ag interests.

Recommend developing a Johnne's disease management contingencies section in the document that discusses State and Federal guidelines for controlling the spread of the disease.

Regardless of Alternative selected I highly recommend NOT removing existing water capture, storage and delivery infrastructure.

If not needed then don't use but better to have and not use than need and not have!

Correspondence ID: 49

Correspondence ID: 50

We have been residents of West Marin for over 40 years, and adore the bucolic life, the glorious weather, the people, the ranches and cannot imagine life with only the elk! The thought of an area full of tourists, shops, traffic, congestion makes us sick!

The elk were placed on the land they now inhabit, and because there aren't any natural predators, the humane venue to take would

be to cull the weak, give the females a shot so they cannot reproduce, and even use some of the elk meat to feed the homeless!

This has gone on long enough! Stop the elk reproduction, and allow the Ranches and ranchers to stay!

Thank you! Nancy Jo Heaton

Correspondence ID: 51

I want the Tule Elk to live. I want them to have support when they need it. I am aware of the rangers rights but we have done enough for them in the last 100 years. The Tule Elk are truly native to Pt. Reyes, they are beautiful, and they are beneficial to tourism dollars. Allowing them to die of thirst was barbaric and the ranchers knew it. I have lived in Marin for 52 years and my family and I vote in every election and we also pay attention to these kinds of environmental decisions that have an impact. Protect the Tule Elk.

Correspondence ID: 54

I have three comments:

1. Why haven't you disclosed that you spent \$1million dollars studying the Fence with the conclusion that the FENCE MUST COME DOWN?
2. Almost 100% of respondents want ranching OUT of the Point Reyes National Park (except the ranchers).
3. WHEN is the fence coming down?

The time is NOW.

Correspondence ID: 55

Correspondence ID: 58

I have enjoyed hiking at Point Reyes and the thrilling sight of tule elk herds grazing at the sea shore. These majestic animals are unique to California and after being driven nearly to extinction, should now be protected. I am in favor of removing the fence that pens them in. The park service should not be catering to the interests of ranchers. Cattle are ubiquitous and not in need of such protections. I am opposed to any further "culling" of the herd, since their numbers have already been drastically reduced due to drought conditions and being artificially cut off from water sources.

Correspondence ID: 59

You are acting like elk farmers while killing the actual ranchers.cull the elk herd.

Correspondence ID: 60

I'm writing in support of the "preferred alternative" for an updated Tomales Point management plan for the Tule elk herd, that includes removal of any artificial barriers preventing them from free access to their territory.

I have watched and read the disheartening issues in relation to the historic "management" of these creatures over the many years I've lived in Marin County, and found it very distressing that the National Park Service would support commercial cattle ranching on public land over appropriate and humane conservation practices for these elk. Please do the right thing going forward and amend your operational plans.

Thank you,

Nancy West

Correspondence ID: 61

Take down the fence.

Correspondence ID: 62

Please let the Elk roam free and get rid of the ranches. The ranchers use up public money that could go to conservationist efforts, and they have proven their complete disregard of the land by continuously polluting it and not even taking basic measures to avoid sewage runoff.

The only reason there are ranchers in the park is the egregious corruption of the individuals who voted to extend their stay.

Correspondence ID: 63

I support the removal of the fence preventing the Tule elk from roaming freely. Tule elk are a native species, unlike cattle. These animals need to be able to go where they need to go to find food and water. Thank you.

Correspondence ID: 64

I would like to see the fence retained and maintained and, if possible, the elk culled, or sterilized so herds do not grow larger and their range expanded. This was the plan when they relocated here from the Central Valley where the herd grown too large too manage. The park has many uses, users, wildlife and ecosystems. iThey need to be stewarded and kept in balance.

Please withhold my personal information from publication

Correspondence ID: 68

Dear Pt Reyes National Seashore,

Please remove the fence that turns the tule elk are at Tomales Point into a zoo. This is a national park/seashore, not a zoo or a ranch. It's long overdue to get rid of these ranches, turn them into history exhibits, and let the wildlife roam free.

Thank you.

Julia Whitty

Hello,

I would like to give my support to removing the elk trapping fence. I would also hope that water augmentation could be continued. Please do not kill these beautiful animals.

Thank you,

Capriecce

Correspondence ID: 71

I support Alternative B.

With the caveat that the fences around the farms don't hinder the free movement of the heard to key areas for food/water.

I also think the NPS needs to do more to monitor water quality and run off from the farms and please work with the local tribes as much as possible.

Thank you!

Theo

Correspondence ID: 72

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes... Remove the elk fence now!

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Correspondence ID: 73

From the available options, I support Alternate B with some comments:

- 1, I would suggest that the removal of water and minerals happen slowly to allow for the elk to adapt to the new situation. Especially since the ranches will still remain (which I disagree with)
2. I really like the collaboration with the tribe, to gain incite.

I will try to watch the Sept. 7th program.

Thank you, David Durbin

Correspondence ID: 74

I suggest Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area to ensure the tule elk will be protected in a manner that protects that population's health, safety and ecological integrity.

Correspondence ID: 75

I support the proposed alternative Unconfined Elk Herd and Pierce Ranch Core Area to allow for free roaming elk herds.

It's time to prioritize native species over cows. Please phase out cattle ranching in Point Reyes National Seashore as was intended when the seashore was established.

Correspondence ID: 76

I heartily approve the removal of the fence at Pierce Pt. in Pt. Reyes. While it's true the historic ranches have been in place

for many years, the elk have the right to be there also, since they are part of that historic landscape. The Park Service and ranchers need to conduct regular meetings to discuss creative ways that will allow both to exist out there. Meanwhile, the Park Service needs to be responsible for keeping the elk alive during the dry months (May to Nov) with water and feed. Please vote to remove the fence!

Diane Bolman

Correspondence ID: 77

I am writing to support removal of the 3-mile, 8-foot tall fence at the southern end of the 2600 acre preserve to allow the tule elk herd to become free roaming. One of the most breath taking hikes I have ever taken was through the preserve to observe the elk in their native habitat on a typical cool, foggy coastal morning. I am saddened that the current management policies contributed to a 35% decline in the elks population.

I am a 30+ year resident of Marin and frequently hike and bike in the Point Reyes National Seashore, a vast and beautiful area that first belonged to the elk and was for generations the land of the Indians of Graton Rancheria. The National Park Service has an ethical obligation to prioritize preservation of the native tule elk and to respect the guidance of the indigenous peoples of the area in preserving the historic ecosystem of the federal lands. There is plenty of space for both elk and cattle, and the fence must be removed.

Respectfully,

Sandra Becker

Correspondence ID: 78

Remove the fence

Correspondence ID: 79

Alternative B. More elk, less cows.

Correspondence ID: 80

The historic and family rancher's of west Marin have been mostly taken over by corporate dairies employing large numbers of undocumented workers. If given the chance hog farming and row crops will take over the once family dairy ranches. Now commercial farms. Please take down the fence that prevents the elk herd from reaching grazing grounds and water supply. In the past horses, dogs, people were used to bring in the cows for milking. Now ATVs tear up the grass lands, while hikers are blocked from accessing the National recreation area.

Correspondence ID: 81

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Correspondence ID: 82

1- Keep the fence in place

2- Remove water stations

3- Cull the elk population when it exceeds the area's carrying capacity

4- Give animals to local chefs to feed the hungry for free [and lovers of this delicate meat for a stew cost]

5- Do prescribed burns;

6- Do it and leave the farmers, the animals and me alone once and for all.

Correspondence ID: 83

Please remove the fence!

Allow the tule elk to thrive - not starve!

Thank you!

Ellen Sanford

Correspondence ID: 84

National Park Service,

I am writing in support of removing the tule elk fencing at Point Reyes National Seashore. Fencing simply does not belong in a National Seashore. In fact, ALL fencing, including the many miles surrounding the dairy ranches, should be removed. I dream of the day that happens and the park can belong, as it should, to all. Thank you. -- Barry Spitz

Correspondence ID: 85

As a Resident of Mill Valley, CA for 27 years I submit My comments on "Management" of Our Tulle Elk of OUR Teomales Park area.

I formally submit to you NOT To Fence In Any way, Our wild Tulle Elk in the Tomales Point Elk Preserve.

We continue to have to Submit comments when We have Overwhelmingly stated that We Demand that Our Tulle Elk Remain FREE.

Cattle should and Must Never be given preference In OUR Park. -- Our tulle elk Must be allowed to roam Free -- It is that simple.

Also, culling ANY of our tull elk an OUTRAGEOUS proposition and is NOT or EVER Acceptable, to We the taxpayers that Employ the Park Services to 'Manage'.

Correspondence ID: 86

Please remove the fence so that the elk can run free. I vote to remove all of the commercial dairies and ranches. They should not be there and are polluting the area.

Correspondence ID: 87

Please remove the fence that keeps the elk confined and away from natural water sources. It's the ethical choice. Prioritizing cattle over elk goes against the spirit and purpose of the National Seashore. Thank you.

Correspondence ID: 88

I hike and enjoy Tamales Point on a regular basis as a homeowner in Marin County. I vote to remove the fence for the Tule Elk so that they can easily find food and water. The cattle, that are the property of private ranchers, should be the ones fenced in as their owners provide food and water for them. They are not at risk of dying from lack of access to food or water. This seems a reasonable transition to the way things are now. Thank you for working to find a good solution to this problem.

Correspondence ID: 89

Take down the fence enclosing the elk herd

Correspondence ID: 90

Tear the fence down already!! The park should preserve all animal life including the Elk. The land is rightfully theirs in the first place!!

Correspondence ID: 91

Get rid of the fence and the ranchers and return the Pt Reyes peninsula to the wilderness status that Rep. Hubert Scudder had in mind when he started the process to turn this area into a national park. The ranchers were supposed to leave a long time ago.

Correspondence ID: 92

I am in support of *removal* of the Elk fence.

I would love to see the park try to restore damage done by free-grazing cattle to help repopulate native vegetation & animals to the area.

We have brought visitors to the park often to see the Elk and hike the trail, but making the beauty of the elk and natural landscape more accessible for people/hikers/disabled would be the best. We need nature and accessible wilderness area spaces <3

Correspondence ID: 93

Correspondence ID: 96

I wholeheartedly agree with those who have stated that the Park Service has caused systemic harm to Tule Elk with the Elk Fence, which bars access to their traditional home, food, and water that would help them survive in conditions that the Park Service was advised were likely to worsen as a result of climate change. The Park Service has exposed Tule Elk to disease, malnutrition, starvation, and dehydration. I share the view that Tule Elk belong here and likewise that the land belongs to them, and therefore are naturally entitled to precedence over private interests and industry. Our health, safety, and integrity benefits from a California that is whole and healthy, with its ability to sustain its native species. I understand that to be a central mission of the Park Service, to protect ecological integrity and biodiversity. The Service's proposal to

remove the fence is the most humane and reasonable solution and could not come soon enough.

Correspondence ID: 97

Correspondence ID: 102

I support removal of the fence..

Correspondence ID: 103

I support removal of the elk fence

Correspondence ID: 104

I support removal of the elk fence. 10+ Marin County resident - it makes sense for the NPS, for the Elk, for the preservation and mission of the NPS to remove these fences.

Correspondence ID: 105

It is my wish the fence be removed so that the elk are free to roam. The ranches are an environmental negative that should be monitored more closely. Dumping raw sewage into pristine water systems is a medieval practice for which people will look back and judge the Park harshly.

Correspondence ID: 106

As a frequent visitor to the Point Reyes National Seashore area, and a lifetime resident of West Marin, I believe that it is essential to adhere to the principles and regulations established for the preservation and maintenance of this special area. To preserve the health and continuation of elk and other wildlife, the elk fence must be removed. Human activity should be limited to supporting the balance of the park's environment and it's wild inhabitants.

Correspondence ID: 107

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Correspondence ID: 109

I am in favor of anything that helps protect the ranches. Given the park has no interest in keeping coyote brush, bramble and poison oak under control there will be less and less for the elk to eat. The elk population will have to be moderated.

Since the park has taken over more land it has become an impenetrable mass of weeds and inedible foliage.

Most of the people who want more elk never visit. I visit regularly and am saddened by the decline in habitat, increase in dead wood and general deterioration of the land. The land was healthier when ranchers had more sway.

The population bounced back this year, so the fences did not harm the elk.

Correspondence ID: 111

It's time to let the elk run freely! I have been monitoring, with dismay, the pollution of our Marin watershed due to toxins from animal and farm waste. It is unethical for agricultural lands to border public recreational lands, pollute them and leave native elk to die.

I am in favor of the proposed action to remove the tule elk fence and all temporary water systems installed during the most recent drought, monitor and manage options for tule elk, and potential opportunities to improve recreational uses and visitor experience at the historic Pierce Ranch.

Correspondence ID: 112

I am very happy that the Park Service is reconsidering the way that they have handled the Tule Elk management. The National Seashore should be managed primarily for wildlife and natural resources, NOT agriculture. The fences around the Tule elk should be taken down and agriculture should be phased out, AS WAS THE ORIGINAL IDEA FOR PT. REYES. And as was done with the Oyster farm.....they were given many years to transition and did not. The dairy farmers have been given lots of money and time to relocate. I was appalled at the damage, especially to riparian habitats, that I have seen in Pt. Reyes from the cattle. In addition, what we know about the severe climate impacts that cattle cause, there is a whole additional concern. If necessary one small historic farm (barn, etc) could be retained as a historical exhibit possibly maintained and open for visitors. The cattle should be fenced in NOT the elk. The Grant-Kohrs National Historic Site in Deer Lodge, Montana is a good example of preserving history with minimum impact on nature

Correspondence ID: 113

1) I am in favor of removal of the Elk Fence.

2) I also am interested in seeing something to have cattle fenced off from public areas of the park, so Elk can flourish.

- 3) I am in favor of managing the invasive species with minimal use of herbicides if possible
- 4) Improvement of accessibility for visitors to see Elk and enjoy Point Reyes natural areas would be ideal.

Thank you.

Correspondence ID: 114

Please take down the fence at Pt. Reyes.

The approximately 500 rare, native Tule elk at Point Reyes National Seashore are not really wild here in this 71,000-acre national park unit just 20 miles north of San Francisco, CA. One of the park's three herds is perennially suffering and dying from being held in captivity, behind cattle fencing built and maintained at the request of private cattle ranches leasing land in this public park.

Over 475 Tule Elk have died in the last 10 years, as a result of being trapped inside the fenced Tule Elk Reserve at Point Reyes, the largest of three herds in the park. This short (under 2 minutes) video shows just one of them: <https://www.youtube.com/watch?v=T46aQFTq76A>

Please take down the fence at Pt. Reyes.

Thank you.

Correspondence ID: 115

National Park Service,

In general, I support Alternative B. The elk fence should be removed in my opinion. I suggest that you create another alternative that includes the provisions of Alternative B, but with specific timetables to accomplish them. Rewilding Tomales Point should be your ultimate goal. While the goals of Alternative B are laudatory, it will take time to accomplish them. For example, it may be necessary to provide water and feed for the elk in the short-term.

Correspondence ID: 116

Please remove the elk fence.

Correspondence ID: 117

I support taking down the fences!

Correspondence ID: 118

I support complete removal of the elk fence.

Thank you,

Meredith Bishop

Correspondence ID: 119

Please take down the 3 mile long fence that is keeping the Tule Elk from being able to reach much needed food and water. As a result of being unable to reach more food and water during seasonal summer-autumn heat and drought, over 475 of the vulnerable elk have died in the last decade. Approximately 262 elk remain trapped inside this fence, down from 445 elk in 2019. This in turn is about 1/2 of the park's total Tule elk population.

Point Reyes Seashore's wild elk are fenced in or only one reason: at the request of the park's privately-owned cattle and dairy operations.

All 3 of the park's Tule elk herds are denied freedom to access its 71,000 acres. 1/3rd of the park — 28,000 acres — is fenced off from both elk AND humans to accommodate beef and dairy operators only leasing land from the public. Millions of annual visitors are also cut off from a third of this public oceanside national park unit. It's clear that ranchers are the priority here - Why, especially when Ranches are also the park's biggest polluters. The untreated manure and urine are the park's #1 source of water pollution. The cattle industry's approximately 5,000 cows at Point Reyes are also the park's #1 source of greenhouse gas (methane) pollution, exceeding the tailpipe emissions of the park's annual 1-2 million annual visitor vehicles.

The cattle industry has corrupted the national park's mission to prioritize wild animals and undeveloped wildlands over the profits of private industry.

This is a disgrace. Please do the right thing by the magnificent yet vulnerable Tule Elk. Especially in this day and age when we are losing so many species to extinction due to global warming and climate change.

Very Sincerely Ondina Nandine Hatvany, MFT

Correspondence ID: 120

To Whole It May Concern,

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes... The elk fence must be removed now!

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and I'm strongly against the proposed Alternatives A and C.

Sincerely, Bob Minkin

Correspondence ID: 121

As Marin County residents we frequently go out to Point Reyes National Seashore to hike. I strongly advocate for the removal of the Tule Elk fencing. The drought made it evident that the fence was inhumane to the elk.

The native tribes of the area should have a major voice in the planning for the area. The ranchers should not be given priority over other users.

Correspondence ID: 122

To whom it may concern:

I am a San Francisco native and I strongly support the outdoor use of public lands and wilderness conservation. As the human population increases, there are fewer and fewer natural

outdoor areas that we can enjoy. Point Reyes National Seashore, it's natural scenery and biodiverse wildlife, is an invaluable treasure that should be preserved and protected.

I strongly support Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area (NPS Proposed Action). It's way past time to remove the Tule Elk Fence at Tomales Point and to allow the native elk to freely roam the entire National Seashore just as the scientific advisory committee recommended back in 1993 (as stated in the NPS public scoping newsletter).

I also firmly believe that it's way past time for the cattle ranches to be removed from PRNS, so that the rest of the hundreds of miles of barbed wire fencing in the Seashore can finally be taken down to allow the public unobstructed access to the natural scenery for public hiking and wildlife viewing. The cattle ranches have the greatest negative impact on the the Seashore (soil erosion, water pollution/bacterial contamination, destruction of natural flora and fauna, and the Seashore is already significantly stressed by the effects of human caused climate change (severe drought and wildfires). Improving the Pierce Ranch exhibit and maintaining it to educate park visitors of cattle ranching at the Seashore would be meaningful, but the destructive ranches currently operating on highly subsidized government leases should be permanently removed.

There is tremendous opportunity for the NPS to restore the critically endangered California Coastal Prairie and Marine Habitats in PRNS. This includes restoring native wildlife (and not confining tule elk to just 3% of the park behind the fence) as well as protecting and allowing sanctuary for existing predators. Permits should no longer be granted to kill predators on public park lands as these natural predators (mountain lions) contribute to the health of the ecosystem by helping to control and keep the tule elk populations healthy.

The NPS should also partner with Coastal Miwok in making management decisions in PRNS. A decade of study by Sonoma State University researchers meticulously documented more than 150 Indigenous Coastal Miwok Sites. The Seashore should be inclusive and celebrate the Indigenous presence and contributions of the Coastal Miwok that have a 10,000 year plus history in the Seashore.

Thank you for your time and consideration.

Sheryl Owyang

Correspondence ID: 123

Please take down the fence segregating the elk at Point Reyes. Thank you.

Correspondence ID: 124

Release the Elk , take down the fence. My Uncle found a tule elk antler near Woodacre , Kent Lake in the 1960's. Obviously they once roamed Marin County which is 80% open space! They belong here.

Thanks!

Correspondence ID: 125

I am a former employee of PRNSA, and studied the history of Tule Elk at PRNS as a graduate student. My studies included an analysis of previous public comments on the General Management Plan amendment planning process stemming from a legal settlement between the NPS and the Center for Biological Diversity, et al in 2017.

I support and request the National Park Service remove the existing elk fence at the Pierce Point Elk Reserve. It is fantastic that this protected national park land is able to provide limited habitat to the endemic California Tule Elk. Euro-American colonization has threatened this unique species with extinction from over-hunting and habitat destruction. At one time in the early 20th century, there were as few as 9 individual Tule Elk. It is clear that preserving this species, who may never regain anything like their native habitat, should be a higher priority for the government and NPS administration than preserving commercial ranches under vague historical pretenses. Removing the fence is humane and responsible, giving the herd greater access to water and nutrition. I would be supportive of strategic culling to manage expanded herd sizes. PRNS can do its part in this important biological and environmental justice work by truly prioritizing its Tule Elk herds, and by promoting their grazing as a central range management strategy.

Correspondence ID: 126

I strongly support removing the fences and allowing the elk to roam free, as the National seashore should prioritize preservation of wildlife over human activities such as farming. I understand that the ranches on the national seashore have been there for generations, but for me, the purpose of the national park/seashore is really to preserve nature, including all flora and fauna, as it existed before human activity. I grew up in San Francisco and spent much of my youth hiking throughout Point Reyes, spending nights camping at sky camp, exploring the bear Valley visitor center, and of course doing hikes to Tomales point and appreciating the beauty of the elk herds. It is so sad to hear about how the elk have been restricted in their movement to such a small area, which is a fraction of their historical grazing area. I hope the national park system can make the right decision here and help put point Reyes on a path that aligns it with the goals of the national parks as a whole, which for me has always meant allowing people to appreciate our nation's national beauty, while making sure to preserve nature in its original form. Thank you.

Correspondence ID: 127
Release the Elk!

Take down the high fences!

They are native not the fences!

Or shall we pen up the Wolf, Coyote, Lion, Bear your so fond about.

Jim

Correspondence ID: 128

I am absolutely stunned that this outrage is continuing !! In May , 2015, the Santa Rosa Press Democrat published a letter to the editor I wrote with regard to this unconscionable situation. Several other citizens also had their letters of protest published and , yet, here we are , 8 years later and the elk are still suffering at the hands of the Pt Reyes ranchers. How in heaven's name can this be justified?! This land belongs to taxpayers and to whatever wild creatures inhabit it, NOT TO THE RANCHERS!

Please grow a conscience and give these poor animals their God given roaming rights at Pt Reyes!

Correspondence ID: 129

I would like to make it clear that all of the elk fences should obviously be removed within our national park. That is the first step that the National Park Service must take to begin to fulfill the fundamental mandates for preservation and stewardship of unique wildlands, wild plants and the native wild animals which all national parks are charged with preserving for the sake of their inherent intrinsic value as unique natural resources and for the access and edification of future generations. Fulfilling this obligation which is codified in the 1916 Organic Act 16 U.S.C. 1 2 3, and 4 as originally set forth and consisting of the Act of Aug. 25 1916 (39 Stat. 535) and amendments thereto is the sole reason that the National Park Service was created.

With that as the guiding principle it is abundantly clear that in order to restore and maintain the appropriate ecological balance to the unique and irreplaceable coastal prairie of the Point Reyes National Park ALL domestic livestock and ALL private ranching lease activities and any and all current or potential future commercial ranching, farming, and or events associated with the current agricultural activities of all lease holders including weddings and any other type of events offered to private parties be permanently curtailed and eliminated.

Point Reyes was purchased decades ago and the so-called 'historic' ranching interests were paid off at above market values with our public money and then given a grace lease period of 20 years. It's time to fulfill this founding vision and get the private, highly polluting intensive and severely ecologically destructive heavily subsidized private ranches, dairies and all associated agricultural and private business and private residential activities permanently removed from the ENTIRE Point Reyes National Seashore.

Point Reyes is not a feedlot for private publicly subsidized profit. Point Reyes is our Bay Area crown jewel and we demand that it be stewarded properly to restore and enhance its natural flora and fauna. Time to end the machine politics and eliminate the destructive private for profit industries permanently from every square inch of Point Reyes.

I also suggest that a park restricted fee entrance kiosk be built so that revenue can be generated to support infrastructure development and maintenance to enhance the public experience and to provide appropriate access to the Park's sensitive and unique resources.

I hope that is clear.

Yours Truly,

Andrew Carothers-Liske

Correspondence ID: 130

I support the fence removal labelled "Alternative B

Correspondence ID: 131

Though I don't go to Pt. Reyes that often I've been there a couple times to on hikes. The last one I had my family from Germany which they enjoyed. Upon coming on one of the bends on the paths, we saw elks and it was a pleasant surprise. It's always a pleasure to see wild animals rather than cows and sheep, which in my mind rejects the notion that this area should be kept natively to wild animals, not commercial. Please bring down the barriers so these animals grow and prosper in the area. Thank you.

Correspondence ID: 132

Please remove the fencing.

Correspondence ID: 133

Let the Tomales Point heard roam free! Adding fences around farms to prevent cows grazing in Tomales Point seems like a positive step.

Correspondence ID: 134

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes.

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Correspondence ID: 135

Hey there, thanks for the opportunity to weigh in. I've followed this issue for years and agree with your proposed alternative (B). While not all change is improvement, all improvement IS change and it's overdue at Point Reyes. That said, I also have a deep respect for private property rights and acknowledge the ranchers at Point Reyes National Seashore have been there for generations. They have a deep connection to the land and to the elk. The plan -as written- does not make mention of concessions for ranchers like landowner elk tags or financial compensation for damages definitively caused by elk. It is my hope NPS will include a provision in alternative B to show respect for the ranchers and their way of life while also honoring the wisdom of their partners, the Federated Indians of Graton Rancheria, and heeding the voice of the customer/public. From what I gather, the public has overwhelmingly voiced support for a measure like Alternative B because it presents the best, most long-term sustainable action to restore the balance of nature.

Correspondence ID: 136

I support Alternative B. I also support not renewing the ranching leases.

Correspondence ID: 137

Start with plan "B" and then remove all of the cattle.

Correspondence ID: 138

Please take down the fence. It's the humane thing to do. Thank you.

Correspondence ID: 139

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start

prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes.

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Kathryn Lutes

Correspondence ID: 140

I strongly support the plan to remove the fence that restrains the Tule elk, add fencing to restrain the cattle, and consider prescribed burns and other natural and traditional means to remove invasive plants. Developing Pierce Ranch as a visitor center sounds like a good idea but is not of as much concern to me. The 'no change' alternative is clearly unsustainable and the idea of killing the elk and denying them water is anathema. Thank you for providing an acceptable alternative and please make sure it happens!

Correspondence ID: 141

Once again, I am writing to the National Parks Department to live up to its real mission - to protect and preserve the nature and wildlife in National Parks. This includes the Tule Elk in Pt Reyes. It is absurd that ranchers and dairy farms would have rights over the Tule Elk. I understand many of these agreements were made a hundred years ago, but they are outdated for what we are called to do for nature and wildlife now. Ranches and Dairy Farms have no place in National Parks. This must change. In the meantime, the fences that are blocking the Tule Elk from sources of water and food at Pt. Reyes needs to come down. Today.

Correspondence ID: 142

I am a resident of Point Reyes and have been out to see the elk many times.

I support Alternative C. The elk fence should be retained and maintained. Removing the elk fence will allow the elk too much access to additional grazing land. This will only make the elk herd grow bigger and bigger and create an even more serious elk overpopulation issue. Removing the elk fence will cause damage to the working ranches and ranch lands. The elk herd size should be actively controlled with culling if necessary.

I am an animal lover and a vegan. But taking down the fence is a stupid idea. If culling the herd is necessary to maintain a sustainable healthy herd size, I support that.

Alternative C is the best and most sustainable alternative.

Thank you!

Correspondence ID: 143

I have visited Point Reyes multiple times over my lifetime(70 years). It is a beautiful natural resource and needs to be maintained in as natural a state as possible.

I support the alternative B plan that has been proposed because it returns the Tomales Point area more closely to what it was before "civilization" came. The cultural Indian practices of fire as well as their use of plants should be used as a guide to how to manage the land.

The elk should not be fenced in. The cattle should be fenced in and controlled. I would support phasing out the dairies from all of Point Reyes, as they are not part of the original human

settlement of the land. Also, cattle pollute both the air(greenhouse gases) and the water(fecal contamination).

So alternative B is the best option.

Frank

Correspondence ID: 144

Free the Elk!!

Correspondence ID: 145

I am strongly for removing the fence and let the animals work things out. From what I've read on this forum, other such areas have shown that elk and dairy cows co-exist well. So let's not over-think it, and give it a try. You do not need to get rid of all the dairy cows first! That's just a rationale behind trying to get rid of all the farms. The farms are a part of our history, culture, and local, sustainable agriculture, feeding us locally. I'm no big meat eater, but I'm not for shutting it all down. I buy Straus dairy products. They are working well at sustainable farming.

Correspondence ID: 146

Remove the fences! Let the cows roam free, why do the chickens get to be free range but not the cows? The elk need to learn how to live with other species, it's not all about them.

Correspondence ID: 147

It would assist in our review of the Options to have you define more explicitly the differences between Option A and Option C. On first glance it may be that herd management/culling may be more aggressive in C than the existing (i.e. Option A). It also appears that in C the water assistance is removed where in A it is maintained. Can you assist with a list of key differences?

Correspondence ID: 148

I firmly advocate for option #2!

We, the public, want to experience the Tule elk in nature, in a natural setting, unencumbered by fences! There should not be competition between cattle and elk for the resources that sustain them. The responsibility falls upon cattle ranchers to build fences to contain their cattle. This is a beautiful wild and scenic area of the seashore! Please retain its wildness! Cattle do not belong here even though these ranches have been allowed to stay.

Respectfully submitted,

Mardi Wood

Correspondence ID: 149

I support option B, the Park Preferred option. I think it offers the best outcome for the Elk and also allows for the continuation of cattle grazing which I understand keeps brush controlled and helps reduce fire danger and also allows more meadows for bird nesting and reproduction.

I would like to see management of nonnative invasive plants be done solely through mechanical means or controlled burn and do not support the use of herbicides which may endanger all living things including the staff that apply the herbicides and have unforeseeable consequences for the health of our planet and park.

I support a reservation system for the beach and cove camping permits with the caveat that non-online options be available [a certain number be reserved for walk in and phone in] and that bots be prevented from taking up spaces and no resale of reservations be allowed.

Correspondence ID: 150

I strongly propose the removal of all elk fences--Alternative B. And there is no reason the farms on the national seashore land should be allowed to continue to operate. They were only supposed to operate for a short time as the original agreement specified--and the cattle are causing pollution and contributing to climate change.

Correspondence ID: 151

The fence should be taken down.

Correspondence ID: 152

Dari Sylvia

Correspondence ID: 153

I support Proposal B, to let the elk live unconfined. Our national seashore is a place for wildlife to thrive. Point Reyes is a rare treasure. Thank you for caring about nature. Protecting wildlife and the natural landscape is most important and, to me, should be top priority.

Correspondence ID: 154

Keep the Ranches & dairy, and keep the elk fence in place. Do not allow free roaming elk heard to invade ranch property, nor allow elk heard grazing on ranch land. Free roaming elk are a potential road hazard, and can cause traffic jams as well as collisions with cars.

Over grazing elk population, should be managed like cattle, and culled if necessary; either by capturing & moving to another forest location, or hunted & shot. Elk meat can be butchered & sold at premium prices to help support the park, or given away to local community services for food assistance.

Correspondence ID: 155

Correspondence ID: 158

I encourage you to open up the space for the elk – they should not be fenced, they should not be deprived of water. They should not be exterminated. They are part of the natural history of Point Reyes. What is not part of the natural history are the dairy farms and cattle. A very pollutant industry. The government needs to stop making money off them and do the right thing by supporting natural biodiversity in our parks systems. Please not make the same mistake and play dirty pool as was done with the axis and fallow deer. No sneaking in White Buffalo in the dark of night and getting rid of a “problem”.

Please do the right thing in this situation. Let elk stay, roam free and limit and weed out the dairy farms to clean up the area. Please work with the native people to manage that amazing area.

Thank you,

Kim Sandholdt

Dear National Park Service,

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes.

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Take down the cruel and inhumane fence that is killing our sacred Elk. You have been entrusted to care for them and your current practices are unacceptable.

Sincerely, Kari Gates

Correspondence ID: 162

Please take down the fence at the Pt. Reyes National Seashore. The elk need water. Keeping them from it is unconscionable!

Correspondence ID: 163

I am writing in support of alternative B proposed in the Tomales Point Area Plan. The fence that restricts Tule Elk to Tomales Point needs to be removed. Removal will increase the Elk's access to browse and water. Grazing by Elk over a larger area will benefit the ecology of Point Reyes National Seashore. Plan B would also improve trails, restrooms, and invasive plant management, changes that are very much needed.

Tule Elk were hunted to near extinction. The current population of 5,700 may be descended from 4 or few closely related individuals. Some 300 of the Tomales Point herd were lost during the recent drought. This represented the loss of 5% of all remaining Tule Elk! The National Park Service's restriction on this genetically fragile species only increases the probability that it may yet become extinct.

The fence was built because of the misguided notion that the cattle at Point Reyes need protection. There is no documented case of Elk transmitting brucellosis to cattle. Even if transmission could occur, the appropriate response is to remove the cattle from Point Reyes National Seashore. Cattle need no protection. There are 28.9 million head of cattle in the U.S. or 5,000 head of cattle for each Tule Elk.

The mission of the National Park Service is to “preserve unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations.” The fence is certainly an impairment to the natural resource of the Tule Elk. Keeping this fence is antithetical to the mission of the National Park Service. Please adopt alternative B.

Correspondence ID: 164

Dear National Park Service,

Thank for the opportunity to comment on this critical issue.

Marin County is extraordinarily lucky to have abundant open space and areas whose natural beauty is treasured, protected, and managed by the NPS, to include the GGNRA, Muir Woods National Monument, and Point Reyes National Seashore.

Visiting the Tule Elk out at Tomales Point is one of my family's favorite outings. The experience of seeing the herds only enhances our reverence for these majestic creatures, adding another dimension to our observation and understanding of the natural world. We are filled with wonder seeing stately bulls and cows with calves in their harems.

The fencing meant to keep the herd from entering ranch areas is both heartbreaking and bewildering. Of course, NO commercial operations should ever be permitted in a national park! Methane and destruction of native grasses are only some of the obvious environment-destroying results of these businesses. Fencing to guard for-profit enterprises, which restricts the movement of the elk not to mention access by visitors, goes against all definitions of a “national park”. The ranches “historic” designation does not supersede the fact that this land is public land belonging to the American people. It is my understanding that the ranchers there have been paid their due long ago, so the renewal of their leases in perpetuity definitely sounds fishy.

It's ironic that it has finally taken Climate Change to focus a lens on the plight of our beloved Tules, perhaps there is a silver lining there somewhere. Adding the invaluable perspective of the Federated Indians of Graton Rancheria to the management of Tomales Point is extremely important for the restoration of this beautiful land to wilderness and preservation of its wildlife.

Thank you for all you are doing to make this happen.

Pamela Spitz

Correspondence ID: 165

IT is time for common sense to prevail . I am sure a compromise solution can be accomplished but a small vocal segment of our population constantly uses voodoo science to shout and disrupt negotiations in order to prove that they have power,trying to upset the farmers and ranchers from being productive and destroy our local economics .

Correspondence ID: 166

National park standards and goals the United States are meant to maintain the parks at a high level of natural beauty and ecological health. The working farms in Point Reyes National Seashore are a longtime detriment to both. They were never meant to stay in the park for very long, and their leases should end. Expanding the area for the tule elk, on the other hand, contributes to the park's ecological value and beauty. NPA should do everything it can to ensure

that the herds thrive and survive without compromising for the sake of cows. The cows shouldn't be there anyway.

Hello,

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes... Remove the elk fence now!

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Christina penniman

Correspondence ID: 169

The Tule Elk have to survive and we as humans and e evaders of thus world need to male sure our wildlife is at the utmost importance..We are not the only creatures meant to be here..Please set them.free to graze and drink as needed for their very important survival..Cattle ranchers can't take presidency in this situation. We must choose a balance and we must choose the Tule Elk.

Correspondence ID: 170

I would like to see the elk fence come down and the ranch operations removed. I think the idea of having an interpretative exhibit about the history of ranching would be a good replacement for the active commercial ranching currently going on. The current cattle operations have shown themselves to be damaging the ecosystem and the ranchers have not held themselves accountable to the regulations that have been conditional to their continued permits. The park service has not enforced the regulations effectively either. Additionally, the current proposals of

native peoples represented by the Federated Indians of Graton Rancheria, should be enacted. The history of the native people who were here for thousands of years should be prioritized over the ranching history. The ranching history should be seen in relation to the native history and the ugly truth that land was stolen and native people dispossessed. The ensuing environmental degradation of European land practices should be highlighted as well. Tell the whole story. Most importantly restore the native coastal prairie elk and all.

Correspondence ID: 171

I strongly support removal of the fence. I recently hiked the Pierce Point trail with my daughter and my grandchildren, ages 9 & 11. I had not hiked that trail in many years and forgot just how beautiful it is. But the elk herd and the elks themselves seemed more diminished than I remembered, which was sad and distressing. I'd like to see us all, including the Park Service, do better.

Correspondence ID: 172

I strongly support removal of the tule elk fence. Keeping the elk behind the fence limits their ability to roam, restricts access to water sources that has resulted in the death of elk, and is counter to the national park role of protecting and supporting wildlife. In addition, the fence has not worked as elk have escaped and are roaming Pt Reyes. So I see no reason to keep a fence that harms the elk and is not effective in restricting elk movement.

Correspondence ID: 173

As a long-time Point Reyes Field Institute instructor, a volunteer for Dinner on the Pacific Plate, and a College of Marin instructor who has taken classes to Tomales Point annually for decades, I strongly support Alternative B, the removal of the tule elk fence. I have had people from all over the world come to my classes and I can assure you they come to see tule elk. They have plenty of cows in their own countries so seeing cows is of no interest.

Toilets would be a good improvement since not everyone knows to go to the ones at McClures which results in people using the bushes.

The one thing I question is implementing "programs to promote ethnobotanical resources in coordination with the Tribe." Native plants in National Parks are normally protected. If "promoting ethnobotanical resources" means allowing people to use native plants, I see that as problematic. I speak as someone who was Education Chair for Marin CNPS for decades and knows native plants and their traditional uses. I hope there is no plan to allow gathering of plants for human use. They should be left for the native fauna, including bees and butterflies, that have no alternatives. Humans have alternatives.

Correspondence ID: 174

I visit Point Reyes frequently to hike. It is difficult to see animals behind a fence. The Tule Elk should be able to roam freely. Too many have died during the drought. The National Park Service has a responsibility to insure that animals like these rare Elk survive and are able to use their national habitat. Take down the fences. Thank you

Correspondence ID: 175

I support the preferred alternative: remove the elk fence! The elk need to roam to be more safe.

Cattle ranching should NOT be allowed in PRNS or TSP; the habitat is for wildlife, not a few "lucky" families. Maybe we could have one small historical demonstration ranch, say less than

25 herd, and INSIDE their own fence. The damage that the ranching does to wildlife habitat in the parks is severe, and should be discontinued as was previously agreed! There should also be severe penalties for ranchers who let their cattle wander outside of their areas and cause damage, as has been happening at Abbott's Lagoon for far too many years!

Correspondence ID: 176

I strongly support Alternative B - to remove fencing and to enhance hiking trails and park facilities.

Correspondence ID: 177

I am in favor of alternative B. There are few Tule Elk anywhere, and there are a lot of dairies all over California. The priority should be to enhance wildlife and the visitor experience. It is much more exciting to see free roaming elk than to see cattle. The leased ranching should be subordinated to the purposes of wilderness and national parks.

Correspondence ID: 178

Vote for alternative B. Please remove the fence so elk roam free and can find water sources. Keep sources of water for drought seasons when no other available and it's critical for their survival.

Sever the link between NPS and ranchers. They do not need to be subsidized for their operations. Dairy and meat are unsustainable , polluting and also unhealthy leading to obesity, cholesterol and heart disease.

Correspondence ID: 179

I support plan B to remove the elk fences!! Yes! It's past time to save these tule elk. And past time to remove the cows from this AMAZING natural habitat.

Correspondence ID: 180

Please remove the fences that inhibit the Tule Elk.

Please stop supporting ranching and the continued destruction of habitat by cattle on what should be park land held in trust for the people and the wildlife, not ransomed to help men profit and to help prop up a dying industry that is bad for our planet.

I support option B.

Tim Park

Correspondence ID: 181

Please remove the fence so Tule Elk can roam free on their native land. And please find another place for the cows far far away from

Where the Tule Elk are indigenous at Point Reyes.

I believe that is Option B.

Thank you.

Correspondence ID: 182

Hello,

I have read through the alternatives and I support Alternative B.

Thank you,

Sue

Correspondence ID: 183

As a veterinarian, I strongly support the removal of the fencing so that the elk can roam freely. Thank you for working on this issue and gathering public comments.

Correspondence ID: 184

Please remove the fence that contains Tule Elk within Tomales Point. It will benefit both hikers and help with the growth of the Elk.

Correspondence ID: 185

I approve of taking down tule elk fence and removing polluting ranches from our public land.

Correspondence ID: 186

I support alternative B! Remove the fence and remove the polluting cattle ranchers!

Correspondence ID: 187

I support removing the elk fence. When the national park started, the ranches took the money and agreed to sunset their operations decades ago. To delay/extend/fight/litigate now is disingenuous, even though I sympathize with the challenges to these local businesses.

Correspondence ID: 188

All the tule elk herds in PRNS should be free to roam. The fence keeping the elk enclosed should be removed.

It is time that PRNS become the wild place that it was intended to be at its founding. Please remove the fence at Tomales Point.

Thank you

Correspondence ID: 189

I am in favor of Alternative B for the Tule Elk at Point Reyes National Seashore. Alternative B will remove the fence that contains the Tule Elk within Tomales Point.

Tule Elk once roamed California. Just a few remain. You are their keepers. Restricting the herd of genetically fragile species to Tomales Point only increases the probability that the elk will become extinct.

Thanks.

Correspondence ID: 190

Dear National Park Service,

CMon, People! DO the right thing!!!! Get the cattle out of there!!!

I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. !!!!!!!!!!!!!!!!
Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans

too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 191

Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park. Furthermore, the ranches were previously paid to leave but they've stayed on for decades.

May you and those you care about enjoy health, freedom, and happiness in consideration of your kindness towards wild animals seeking the same.

Thank you for your time.

With blessings,

Correspondence ID: 199

Hello National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want to see all these private cattle ranches removed from OUR public park, the people's park. The cattle and dairy

Ranchers thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations such as the bovine leukemia virus and Johnes disease which are also zoonotic to humans.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 200

I am in favor of Alternative B.

The Elk Herds should be a top priority.

America should substantially reduce commercial meat and dairy production for the good of the populace and the good of the planet.

Thank you for your consideration.

I strongly support Alternative B for the Tomales Point Area Plan. The elk must be permitted to run wild and not be constrained by fencing. Secondly, Alternative B must be modified to prevent and forbid any grazing of domestic cattle within the Tomales Point area plan.

I also support removal of domestic cattle from as much of the entire seashore as possible. Regardless of the alleged history of grazing in the seashore prior to establishment, cattle destroy the very amenities which parks are meant to protect and preserve.

It is time to stand up to the ranchers and simply say no more free or low cost use of the public recreational lands.

Correspondence ID: 205

Take the tule elk fence on Pt.Reyes down

Correspondence ID: 206

Please take down the fence; thereby letting the elk have the full use of their territory. this action will improve the park... and the experience of the human and animal users of the National Park.

thank you for taking my comment.

Dear National Park Service,

I strongly agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. This fence has confined the elk for 45 years, serving only to benefit private cattle ranches which have no place in our public parks. National parks are owned by US citizens and should exist for the benefit of all of us, not just a few private ranchers.

Among other negative impacts, the cows cause pollution and soil erosion. They contaminate the park's streams; any wildlife who consume this water are endangered by their presence.

There is no justification for commercial cattle operations in our national park. The ranchers need to be held to their agreement to leave the park. They can move their operations elsewhere in California.

Thank you.

Correspondence ID: 215

remove the fence, end the welfare ranching on National Forest Land and bring back the much needed biodiversity to Point Reyes

Correspondence ID: 218

To the NPS:

I strongly support removal of the fence confining the tule elk to the Tule Elk Reserve at Tomales Point inside Point Reyes National Seashore. The elk have been fenced in since 1978 purely for the benefit of private cattle ranches.

I oppose the use of public lands by private individuals/corporations for raising cattle and other livestock. My opposition stems from the damage to the land and the environment from this practice. Indeed, the waste (manure and urine) produced by the livestock contaminates streams, ponds, lakes, and groundwater in the park. The potential result is literally poisoning the wildlife in the area.

After removal of the fence, it will be the responsibility of the NPS to protect the tule elk in all ways. That is, the tule elk must be free of interference by all humans, including visitors to the park, ranchers, farmers, and others. In particular, the tule elk must be protected from exposure to diseases common in commercial dairy and beef operations.

The restrictions to protect the tule elk will only be as good as the enforcement. Desirable results will require monitoring land-use practices of ranchers, ensuring the tule elk (and all other wild animals) are not disturbed. Significant fines must be levied--and collected!--for failure to observe all protections of the tule elk.

Regards,

Kathy Keller

Correspondence ID: 219

I feel strongly that the Park Service should take down the fence separating the Tule Elk from the rest of the Park. Elk should replace cows, which do not belong in Pt. Reyes and are causing harm to the land and ocean. Elk have been here for thousands of years and along with other native plants and animals should be prioritized by the Park Service. Dairies were to have been eliminated from the Park and were paid at the founding of the Park to relocate. Instead, there are now thousands of polluting cows.

Please do take down the fence, as a first step toward restoring what is a national park, not a dairy farm!

Thank you for taking public comment on this issue which has been a concern of mine for many years.

Helen Fauss, Marin resident

Correspondence ID: 220

I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has illegitimately and very harmfully confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I urge you in the strongest terms to remove all the cattle ranches from our public park. Cattle, are non-native animals that cause massive damage, especially in the arid and semi-arid west, as they have done in OUR park. The thousands of cows here displace native animals like elk, destroy native vegetation, and produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Alternative B: take down the fence and stop prioritizing commercial ranching over wildlife within the park.

Correspondence ID: 223

Dear National Park Service,

I agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Cows outnumber elk 10 to 1. There is substantial environmental evidence that the E-coli bacteria from the manure of 5,000 cows is the main source of significant pollution and damage to Pt. Reyes soil, creek, lagoon, and ocean. The Elk enrich Point Reyes, while cattle ranchers destroy the Park's health and biodiversity, which is unsustainable.

Please do NOT allow the shooting and suffering of these supposedly protected majestic elk, so critical to balance our delicate ecosystem at Point Reyes National Seashore.

This is a National Park, not a cattle ranch. Allowing ranchers to decimate wildlife is a violation of the Park's legislation that require prioritizing and protection of natural resources over raising and slaughtering farm animals for profit. In 1962 when the Park was created, the dairy industry was already awarded millions of dollars to leave the National Park by 1987.

Thank you for your attention on this critical decision for wildlife.

Correspondence ID: 224

Dear National Park Service,

My heart breaks when I think about the way the Tule elk have been abused--some of them to the point of death.

This must be stopped.

I agree 100% with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore.

This fence has cruelly — confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

This cruelty must be stopped.

In addition, we must remove all the private cattle ranches from our public park.

This is OUR park. It is paid for by OUR taxes. We are fed up with subsidizing private ranches with our tax dollars.

Commercial cattle operations are big polluters and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, we must monitor ranchers in this area and levy heavy fines on them if they haze, harass, or harm any elk or wild animals in the park, ever.

We MUST protect our precious wildlife.

Thank you.

Correspondence ID: 225

I support the NPS' preferred alternative, "alternative B" to remove the elk fence. 100% take that thing down, at last. These are native animals and they deserve no less than to roam free in a national seashore!

Correspondence ID: 226

Free the Elk! Allow the Elk to Roam! Take Down the Elk Fence! Remove Cattle and their Fences from PRNS!

Correspondence ID: 227

I am urging the Park Service to remove the fencing that prohibits the movement and range of the Tule Elk on Point Reyes National Seashore. We have the ability to free the herds so that they have access to grazing land and water. This is the right thing to do and is long overdue.

I urge the Park Service to commit to the welfare of the animals.

Thank you.

Correspondence ID: 228

Dear NPS,

My parents have taken me to National Seashore since I was age five. We grew up in the east bay, but relocated to Marin, my father taught biology at College of Marin for thirty five years.

My younger brother and I learned to swim at Shell Beach, and made sand castles at Drakes Beach.

I support Alternative B. Please allow the elk to roam free.

Thank you,

Lisa Ridge

Thomas Ray

Correspondence ID: 234

I support the NPS plan to remove the elk fences. It is wrong to pen in native wildlife as if they were cattle, and the dire consequences of this misguided policy have included tragic die-offs of elk in drought periods. Elk need the ability to search out new food and water sources and expand their range into formerly occupied habitat. Ranchers who choose to remain in national park land must accept that competition for cattle forage with wildlife is part of the deal. Point Reyes is first and foremost a wild place and must be maintained thus according to NPS mission. If elk become too numerous due to lack of natural predators, a hunting season could be considered, regulated by USFWS. Culling would promote anti-government sentiment and should be considered only as a last resort. Thank you for managing this precious park according to NPS mission for the benefit of wild animals and natural habitat first and foremost.

Correspondence ID: 235

Please take down the fence! The Tule Elk should be able to roam free not the dairy cows.

Correspondence ID: 236

Dear NPS and Pt. Reyes Staff,

Thank you so much for taking into consideration the public's viewpoints on this important topic, as you move forward toward a more improved plan to better manage the Tule Elk population via the TPAP.

Pt. Reyes has long been one of my very favorite natural areas to visit in the greater Bay Area, and I am an avid hiker and camper, and lover of nature, and have spent innumerable trips to Pt. Reyes over the 45 years I have lived in the Bay Area.

I am in support of Alternative B, as proposed by the NPS, and in particular, I am in full support of removal of the Tule Elk fence. That said, I do have concerns about any immediate removal of the supplementary water sources that have been provided to the elk in recent years, especially in light of the recent negative impacts the extended droughts have had on the Tule Elk population. I would hope that these supplementary water systems will be phased out gradually, to give the elk population a chance to find alternative water sources that they can learn to rely on. Maybe you already have a transitional plan for this change.

I especially appreciate that the NPS is partnering with the native Tribe to develop preservation plans that best respect the cultural, historical and other important needs of the indigenous population.

Lastly, and most importantly, I urge the NPS to work toward phasing out cattle and dairy ranching throughout the Pt. Reyes National Seashore.....long overdue. The environmental detriment caused by these industries and the desire for their closure have been expressed by the general public for a long long time. It's time to listen and act. Public park lands should not be sacrificed for private businesses.

Correspondence ID: 237

Dear National Park Service,

I urge you to adopt your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. This fence has confined the elk for 45 years, since 1978, often causing starvation, dehydration, and other forms of death to members of the herd. The fence is only there to benefit private cattle ranches, which do not belong in a national park that belongs to ALL Americans.

Like many other constituents, I also want ALL of the private cattle ranches removed from our public park. This land belongs to ALL of us and is being fouled and polluted by thousands of cows that do not belong there. These thousands of cows consume massive amounts of water and feed, and produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-born cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 238

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed, the elk to roam freely and steps should be taken to allow avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Correspondence ID: 240

Regarding Point Reyes National Seashore, please use Alternative B, take down the elk fence, and get the ranches out of our park. We all know this is the appropriate action to take in a national seashore and there is no reason to do otherwise. Let's have a beautiful, clean park without the polluting influence of the ranches, and their detrimental effect on the elk. Thank you for your help in this matter. Dan Eckhard

Correspondence ID: 241

Dear National Park Service,

I agree with your preferred

“Alternative B”

to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park.

Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you, Sincerely, Phoebe Vernier

Correspondence ID: 242

I have lived in California all my life and have enjoyed Point Reyes National Seashore with my family. It is enjoyable to see roaming elk on the hillside in their natural habitat. Keeping them in fenced areas is uncalled for and they are unable to find food, water, and minerals needed to survive. It their land originally and not cattle. Cattle should be fenced in and contained. If need be the elk should have supplemental water if drought occurs again. These animals belong to the coast just as birds and seal population. Thank you.

Correspondence ID: 243

Dear National Park Service,

We agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park’s streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

The presence of Elk is an important element in a complete forest ecosystem and contribute to the balance and stability of the forest.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Correspondence ID: 244

I took my son out there not long ago for the first time (we usually just go to Limantour Beach). A beautiful spot and we loved seeing the elk. I vote for alternative B - anything that helps them thrive is the right thing to do.

Thank you

Correspondence ID: 245

Please do the right thing and take down the fence so the elk can roam free.

Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park’s streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 247

Please take the fence down.do the right thing ..thank You for Your time

Correspondence ID: 248

Please remove the deadly elk fence at Point Reyes National Seashore. Please also prevent any hazing and harassment from ranchers who still won't want elk on "their" cattle ranches — even though it is not their land, it's all of ours, including wild animals; the park belongs to the public.

Correspondence ID: 249

*Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Carrie Bishop

Correspondence ID: 250

Just remove the fence at Tomales Point.

Correspondence ID: 251

Ulla-Britt

Correspondence ID: 252

Thank you, NPS for listening to the overwhelming voice of the public and removing the elk fence from Point Reyes

. Fences are inappropriate in wilderness.

Cattle should not be prioritized over wild animals.

Correspondence ID: 253

If you want me to visit the park and provide traveler's dollars to the nearby hotels, restaurants a

ND other businesses, then you'll free the tule elk and treat them with the respect their special species is due.

Correspondence ID: 254

Please pursue a plan to move all dairy and beef cattle and all occupied ranch buildings and related occupied housing out of the PRNS. As the cattle are removed, encourage the growth of the tule elk herds by removing the high, barbed wire fence that separates the Pierce Point herd from the natural water resources to the south. The work should be pursued with the requirement that the mess left by the ranches is cleaned up and diseases transmitted from cattle to the elk are brought under control. Natural mammalian predators of the elk should be allowed to manage the elk population as naturally as safely possible for responsibly parented human children.

I look forward to the beneficent results of your best efforts.

Correspondence ID: 255

Please implement Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, NPS, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable, it was a shocking cruelty to witness. The public was overwhelmingly opposed to it.

Once the elk fence is removed, the elk to roam freely and steps should be taken to allow avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

I am tired of federal land management agencies allowing livestock to decimate our beautiful public lands, accelerate climate change and loss of native species. Nothing turns a healthy ecosystem into a wasteland faster than cattle and sheep.

Correspondence ID: 256

Nancy Scott Cayce

Correspondence ID: 258

I am writing to ask the NPS to implement Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area. Removing the elk fence from Point Reyes is an essential step toward fulfilling the purposes Congress established for the National Seashore.

As articulated in the Point Reyes enabling and implementing legislation, the National Seashore area is set aside for “the maximum protection, restoration, and preservation of the natural environment within the area,” and “to provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

The unnatural confinement of the native elk by fences (or otherwise), leaving them to suffer and die of thirst and malnutrition in this designated national parkland is cruel, inconsistent with the purposes of the National Seashore, and simply unacceptable. Once the elk fence is removed, the elk should be allowed to roam freely, and all reasonable efforts should be taken to avoid any culling, hazing, or harassment of the elk.

Fundamentally, cattle ranching operations must not continue to be prioritized over protection of wildlife and their habitat at the National Seashore. Continued cattle ranching Point Reyes causes extensive environmental degradation and, in the interests of responsible stewardship, should be discontinued.

Thank you for your time and efforts to find an environmentally superior and more humane plan for management of the Seashore that respects, and appropriately cares for, this national treasure.

Very truly yours,

Heather Lee

Correspondence ID: 259

Dear National Park Service, I agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore which has confined the elk for 45 years, only to benefit private cattle ranches.

In addition, all of the private cattle ranches should be removed from our public park. Correspondence ID: 262

Please free the Tule Elk who are native to this area and allow them to have access to fresh water and food. The cattle ranchers are the real polluters and invasive procedures that are damaging our national land in Pt Reyes.

Correspondence ID: 263

To Whom it May Concern:

I am thrilled that NPS is recommending the morally correct and common sense option of removing the fence that is keeping the Tule Elk from the water these animals need to survive. Every living creature needs water! Take down the fence asap, please and thank you for suggesting it! So, to make it clear, I agree with your 'preferred alternative B' to remove the fence. YES to B. Remove the fence killing the Tule Elk at Point Reyes National Seashore!

Point Reyes is a national treasure. Tourists come from all around to experience nature! Tule Elk are a big part of that experience. The dairy farms do not belong there. Get rid of the dairy farms that are polluting the ocean with runoff. Taxpayers want to support the natural beauty of the park. Dairy farms pollute and defile nature. PLEASE TAKE DOWN THE FENCE. And, go the added step of getting rid of the dairy farms.

Thank you!

Correspondence ID: 264

Please implement the Park's Preferred Alternative and remove the 3-mile, 8-foot-tall fence at the Tomales Point Elk Preserve and allow the largest tule elk herd to become free roaming. The elk MUST be protected. No culling or fencing the elk off from grazing and water sources, A fence to prevent cattle from private ranches in the park from entering Tomales Point should be considered.

Thank you,

Jill Sideman

Correspondence ID: 265

I agree with your preferred plan B to remove the fence! Please save these beautiful creatures that need the water source on the other side of the fence. They have surely been roaming the west & have a migration route that's imbedded in their DNA. They were here long before ranchers & cattle & never needed the help they need now.

Please remove the fence

Thank you for your time,

Sincerely, Bonnie Langford

Correspondence ID: 266

PLEASE remove the Fence so these beautiful Elk can get water!!! How awful that this has been constructed and many have died languishing without water!!

Correspondence ID: 267

Dear National Park Service, I agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 268

I support plan B. Let's return this National Park to its natural state. Cattle grazing is not good for the environment and it is preventing the land and it's native animal species from returning to their natural balance. Thank you!

Correspondence ID: 269

I support option B, removal of the fence confining the elk to the very limited area of Pierce Point Ranch. There is a very small number of Tule elk that still range over their historical territory. At this point sacrificing hundreds every time there is a drought makes no sense in the effort to recover this subspecies. I hope that the Park Service can help ranchers accommodate this change.

Correspondence ID: 270

Dear National Park Service,

Leslene della-Madre

Correspondence ID: 273

*Dear National Park Service,

I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches and not the elk. The elk should be allowed to roam freely . Thank you in advance.

Correspondence ID: 274

I am concerned about the iconic Tule Elk that management would limit their range and cull the

herd. I want the Elk to be able to be free ranging and if anything given more support and care for their presence. Thanks for your support in this matter.

Correspondence ID: 275

I am writing to voice my support for protection of the native Tule Elk and restoration of the natural habitat at the beloved Point Reyes National Seashore. I support the National Park Service's preferred alternative, "alternative B" to remove the elk fence. I would also like to see the wildlife and natural values of the park protected by having all the polluting cattle ranch uses discontinued.

Correspondence ID: 276

Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! As someone who swims regularly in Tomales Bay, the ecoli levels are often off the charts because of the cattle manure. Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

Correspondence ID: 277

Remove the Elk Fence! Allow the Elk to Roam Freely! Restore PRNS with Native Wildlife and Flora!

Correspondence ID: 278

I back preferred alternative to remove the fence

Correspondence ID: 279

Dear National Park Service,

I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. This fence has confined the elk for 45 years, since 1978!, only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park.

Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams, and poisoning elk, fish, all wildlife — and us too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in commercial dairy and beef operations.

Finally, ranchers must be monitored - and heavily fined! - if they haze, harass, or harm any elk or wild animals in the park, ever.

Sincerely, Darshana M. Greenfield

Correspondence ID: 280

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Animal agriculture is also one of the main drivers of climate change. By eliminating ranching at Point Reyes, we are actively contributing to the reparation of our planet. We have no time to waste!

Correspondence ID: 281

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area

Correspondence ID: 282

Jill Lublin

Correspondence ID: 283

Free the Elk and fence in the cattle

Correspondence ID: 284

I agree with your remove the fence.

Correspondence ID: 285

The National Park Service (NPS) has proposed removing the lethal Tule elk fence at Point Reyes National Seashore, in the SF Bay Area. I am strongly in support of this!

For private profit, the dairy/cattle industry has exploited undeveloped wild land where the elk have lived for decades. This land actually belongs to the public.

Each year Tule elk suffer and die from inadequate forage and thirst. Over half of them within the so-called "Tule Elk Reserve" died in just two seasons. While about 5,000 privately-owned cows in the park are given exclusive use of 28,000 acres of this public park. Even the public is denied access to this third of their park.

I strongly urge you to adopt the NPS' preferred alternative, "alternative B" to remove the elk fence. Please also plan the removal of the polluting cattle ranches from the park.

Thank you for your consideration!

Antonia Moore

Correspondence ID: 286

Please do what is humane and right and take down the fence that causes needless death and suffering in the native elk population in Point Reyes National Seashore. This is PUBLIC LAND and the elk were here long before we were. I urge you to heed the voices of the majority who no longer wish to see and hear about these majestic animals being starved and driven to sad and pitiful deaths due to horrific land management and the will of a few cattle ranchers.

Do better. Please. Take down the fence of death. Let the elk roam free on OUR LAND.

Thank you, Mel Bearns

Correspondence ID: 287

The fence has to come down, thank you Park for recognizing that. My great-aunt used to take us to see the Tule Elk in Kern County, and it's been awesome to see them living here, as they have been for thousands of years extending back into the large animal Pleistocene. I have learned a lot about the natural world from watching them over the years. I can see deer but I cannot see elk by my home in San Rafael, I am depending on the Park with its natural, wide expanses for that, and to see other native animals and plants in their habitats.

Yosemite has granite peaks, Yellowstone has hot springs, but Pt Reyes has a peninsula jutting out into the magnificent ocean, and with whales, elephant seals, and elk, it is starting to resemble Yellowstone in the way of big, charismatic animals. It's a public place and too special to have cows on it and private industry. The thousands of huge non-native animals have erased most of the native ecosystems out there, blighting the landscape so we don't know what natural Marin should look like, and pollute the creeks, esteros, ocean, and air on a daily basis.

I have enjoyed seeing the elk in the PP area, at Drakes Beach, and at Limantour, on hikes and from the road. I recognize their big trails, hoof-prints, beds, and poop, I have heard their creaky knees and their bugling, I can spot their white rumps from far away, and I see their winter coats changing into summer ones. I have seen herds silhouetted on the ridges on foggy mornings. I know the ruffs on their necks, the ridges on their back, the planes on their face, and their big brown eyes. I have seen their antlers festooned with greenery and branches thrashed to get the velvet off. I see how different groups hang together and how they act.

This is why we have National Parks.

The elk have suffered horribly in jail at PP. It is way past time to let them out. National Parks were never designed to be showcases for dairy/ranching and private industry. I know the Park knows what the right thing to do is, and can stand up to the pressures exerted by the various facets of the ranching industry. The fence has to go.

Correspondence ID: 288

I support plan B. It is time that we took proper care of the native tule elk and the land that is part of a national seashore. I personally do not believe that private enterprise should be allowed on public land. I believe that the animals deserve to be humanely treated and the land needs to once again return to its more natural state.

Correspondence ID: 289

Please opt for Plan B to take the fence down to allow elk access to drinking water. Death by avoidable thirst is slow and cruel.

Correspondence ID: 290

Hello! I am a frequent visitor to Point Reyes National Seashore, regularly spending money and days in the park and surrounding communities. The elk fences prevent the park service from fulfilling its mission to preserve natural and cultural resources and values for the enjoyment, education, and inspiration of this and future generations. To meet these goals, the elk need access to more natural resources. We value our elk, we value the land, and both are abused when the interests of cow owners are placed first.

Correspondence ID: 291

Hello, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Also, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

This is so important for them--and us.

Thank you!

Correspondence ID: 292

Yes. Please remove the fences. I am in support of removing the fences in point Reyes.

Correspondence ID: 293

Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you,

Steve Lillo

Correspondence ID: 294

Option B is the fairest choice in the difficult situation of Tomales Point. It is necessary to give the tule elk their lands. The cattle need to be kept off the land. The ranchers sold the land at a good price and we're granted 25 years plus a 15 years extension of grazing access.

Furthermore the land is not private or for individual industry but a National Seashore. The ranchers treat the land as their own and have not cared for it as a common treasure. Water has been blocked by ranchers making existence for the tule elk herds precarious.

They ranchers have benefited greatly from the sale and the use of the land.

It is time to turn the land back to the native peoples and to the tule elk. The land needs care and so does the wildlife.

Correspondence ID: 295

Hi Craig,

Please go with alternative B and take the fence down

Correspondence ID: 296

FREE RANGING ELK PLEASE

Correspondence ID: 297

How dare these ranchers trespass on OUR PUBLIC LANDS and allow our wildlife DIE.

PLEASE TAKE ALL of the fence down and stop allowing wildlife to starve and die if thirst.

This is an outrageous injustice!!

Correspondence ID: 298

The fence should've never been there in the first place. Take it down and let the wildlife thrive.

Correspondence ID: 299

TAKE the fence down. I SUPPORT PLAN B. Get ranchers off our public land and protect wildlife and ocean. My tax dollars are not suppose to go to ranchers profits. This is OUR PUBLIC LANDS AND OUR WILDLIFE. These cattle ranchers are trespassing and murdering wildlife. Please don't side with dairy and cattle ranchers. Get them out of our public lands ASAP. They are dying everyday. Not to mention the dangerous pollution caused by animal AG.

Correspondence ID: 300

I agree with your 'preferred alternative B' to remove the fence.

Correspondence ID: 301

I agree with your 'preferred alternative B' to remove the fence.

Correspondence ID: 302

I completely commend and agree with choice B .. TO REMOVE THE FENCE.... This is interfering with animals like the ELK and beyond in their god given right as our fellow beings on this planet to assess water food earth migration... Thank you 🙏

Correspondence ID: 303

YES TO ALTERNATIVE B — Please protect the Tule Elk! It is absurd and damning what is happening, especially in the interests of big ag. Please do the right thing and remove the fence.

Correspondence ID: 304

I write as a citizen and supporter of our National Parks, urging that the fence confining the tule elk in the Tomales Point area of Point Reyes National Seashore be taken down. The tule elk are a native species and a living part of our natural heritage, and they need to roam freely within the park, enjoying full access to habitat lands and fresh water. Furthermore, the livestock industry should be served an eviction notice as cattle are an invasive species degrading the lands and polluting the air, soil, and water.

Correspondence ID: 305

Yes please remove the fence .

Correspondence ID: 306

I agree with your 'preferred alternative B' to remove the fence.

PLEASE REMOVE THE FENCE ASAP!

Correspondence ID: 307

PLEASE REMOVE THE FENCE!

I agree with your 'preferred alternative B' to remove the fence.!

Correspondence ID: 308

I agree with your 'preferred alternative B' to remove the fence.

Correspondence ID: 309

I remember this lovely area from years ago when my friend took me there. The Elk need water to survive. I understand that this might cause some consternation among the farmers but we can no longer afford to let animals die off because of our endless needs. We will consume away till there is nothing left to consume.

LET THE ELK DRINK AND LIVE> Thanks, Pat

Correspondence ID: 310

Since we've put a man on the moon, the human population has more than doubled while that of the wild animals has more than halved. The survivors, including the Tule Elk need full protection and deserve to live and raise their families in peace. I absolutely agree, without reservation, that the fencing be immediately removed. It is absolutely shameful that it was erected in the first place.

Correspondence ID: 311

Please take down the fence. It's the right thing to do. Thank you for listening and for caring about wildlife welfare. ❤️

Correspondence ID: 312

YES, get rid of fence! I agree with your 'preferred alternative B' to remove the fence. It's only fair. It's not right to starve wildlife of water and food just for the cattle industry. Please remove fence. Thank You

Correspondence ID: 313

Yes! Get rid of the fence.

Correspondence ID: 314

GET RID OF THE FENCE !!  !!  !!

Correspondence ID: 315

I support the proposal to remove fencing in point reyes national park in order to prevent more harm to precious wildlife like the tule elk. Thank you.

Correspondence ID: 316

No animal should have to die of thirst. Please protect the elk.

Correspondence ID: 317

Yes! Remove the fence(s). AND get the cattle off the land. No more leases for ranchers.

Correspondence ID: 318

I choose Alternative B, to remove the fence and allow wildlife to survive healthfully. Honestly, people should see healthy land with lots of native biodiversity – not cows and grass. The cows are poisoning the land, the air and the water, and wild animals are “culled” at the request of the farmers. A national park should have healthy wild animals living freely, but much of Point Reyes has turned into “just another farm.”

I'm excited that the fence might be taken apart. Research shows us that any time farmed animals are taken away, biodiversity on land and in the air increases. Even the tiniest step in siding with the wild animals is wonderful!

As cute as cows' faces are and as much as they are romanticized as somehow “American,” they are greatly contributing to climate change with 98-99% of the methane they give off rising into the air to warm the planet and only 1-2% being sequestered as CO₂, but not stored, as grass is temporary and does not have deep enough roots. Don't believe the businesses – believe the people who love animals and yearn for a beautiful, wild earth. We must fall in love with wilderness again, and see that as the American landscape!

Correspondence ID: 319

Remove the fence so Tulsa Elk have access to water. They are a native species and need us to help, not hinder them. Cattle are an invasive species. Take them out of our national parks!

Correspondence ID: 320

I strongly support the Alternative B proposed action! I have visited Point Reyes many times to photograph and enjoy the wildlife of the seashore. Removing the elk fence, and allowing the elk to expand through the seashore is an important step in keeping the seashore wild!

Correspondence ID: 321

As a twenty year resident of Marin county I support the removal of the Elk fences to allow these iconic and rare animals room to roam so they can survive.

Commercial ranching and government giveaways to private businesses on public lands at the expense of native wildlife and natural habitats is a violation of the Public trust and the original Act establishing the public lands.

The fact that many of the ranches operating on these lands were already paid “fair market” value yet continue to be subsidized by being allowed grazing rights, is a illegitimate use of tax payer dollars and a violation of the public trust.

Far too often, commercial animal agriculture interests are prioritized over the needs of wildlife and people who seek to enjoy the public lands. Point Reyes is a clear example of this. The elk are protected by law and it is past time for the NPS to stop prioritizing the interests of the ranching industry over the well-being of the elk and the rights of the greater public.

As someone who has led “nature based outings and walks” for over a decade - too often our group of visitors from different states and 6 different countries had to witness damaged habitats from ranching, and starving Tule Elk! (In some cases even Elk carcasses!)

The Point Reyes Act - that set aside this land for public benefit and protection of the natural environment, has been and is being violated by the very agency charged with carrying out the Act.

This land belongs to the people and to the wildlife and native plants - not a handful of private industry owners.

Not only do I support the removal of fences, I also expect the the agency will stop any harassment or killing of the Elk by ranchers.

Correspondence ID: 322

*Dear National Park Service, I agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park’s streams and poisoning elk, fish, and many other wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park, and the rancher’s cows and their manure and urine have gone way above the allowable standards for pollution.

Once the elk fence is removed, elk must be protected from greater exposure to manure-bourne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you,

Lisa Kaiser

Correspondence ID: 323

I agree with your preferred alternative B remove the fence.

Correspondence ID: 324

To the Point Reyes National Park Service:

It is time to immediately take down the 8 foot tall 3 mile long fencing inside of Tomales Point at Point Reyes National Seashore.

This has been a death sentence for our native wildlife, just for the purpose to serve ranchers, who have an incredibly favorable "lease" on our national park land. All citizens know that commercial cattle ranchers have no right to control and restrict access to our national parks. Hundreds of our native tule elk died because ranchers fenced off access to fresh water; this alone should tell everyone that the right thing to do is remove commercial ranching from taxpayer funded national parks and return the land to nature.

We all know that the Point Reyes Park Service spent \$1,000,000 (ONE MILLION DOLLARS!) to study whether the fence should come down, and we know the results show conclusively that the fence must come down... perhaps the ranchers should reimburse us tax payers for the cost of this study!

REMINDER: the ranchers must pay for the cleanup of their cattle offal and pollution. As tenants, they are responsible to clean up the land and waters to ensure that native wildlife isn't sickened by their pollution.

I think we can all agree that the ridiculously low "lease" paid by ranchers means they can afford to clean up their mess.

Thank you for doing the right thing and removing that fence and commercial ranching from Point Reyes National Seashore,

Ellyn Berner

Correspondence ID: 325

I firmly support the Alternative B proposed action, which removes the elk fence and frees the confined elk.

Correspondence ID: 326

Remove the fence and free the tule elk!!

Correspondence ID: 327

My name is Edgar Molina and I am a wildlife photographer who frequently visits the Tule Elk in Point Reyes National Seashore. I've watched countless elk pace the fence at Tomales Point and it is absolutely heartbreaking to see that we are prohibiting their movement with an 8ft fence.

It's time for that fence to come down.

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Thank you.

Correspondence ID: 328

Stop killing wild life for cow meat and dairy!!!! You're KILLING INNOCENT WILD ANIMALS!!!!

Correspondence ID: 329
YES TO ALTERNATIVE B

Correspondence ID: 330

I am in support of the NPS plan to take down the elk fence in Pt Reyes National Seashore. We lost 50% of the elk herd that were captive behind the fence due to drought in past two years. Herds that were not behind fence did not suffer the same losses.

Correspondence ID: 331

Correspondence ID: 334

Please protect the tulle elk and give them all the access they need to survive. This is a national seashore and the animals there are your responsibility to keep safe. Point Reyes is a truly

unique and special space and the elk should not continue to suffer bc the ranchers are taking the space and resources for their cattle. Please do the right think for the elk and the environment and California- in short please do your job.

Correspondence ID: 335

Hello National Park Service Officials:

I am a past resident of Northern California and have visited Point Reyes National Seashore numerous times. It breaks my heart that wild elk are casually endangered when in the past wildlife and plant life have been respected and cared for--with a view that land is for all of us and that wildlife are precious. It is for these reasons that I join many others in asking the National Park Service to please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Thank you very much for your careful consideration of my request.

Sincerely, Susan Goldstein

Correspondence ID: 336

We the taxpayers do not agree with these trapping fences designed to dehydrate, starve and kill our beautiful Tule Elk.

It is the NPS's obligation to protect natural resources of the park and our endemic species!

This act is in direct opposition to the narrative being fed to the public on our national resources, planet and species.

Protection of species over profit.

Please remove the fences.

Correspondence ID: 337

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

Correspondence ID: 338

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. Correspondence ID: 339

Remove the fence.

I agree that it's time to remove the fence. With the change in climate, it is causing more harm than good without them having the ability to forage freely for food and water.

Would also love to see the cattle removed. These farms have other land and the farmers are not being good stewards of this area. It's simply cheap land for them - a resource that should be protected and wild.

Correspondence ID: 340

Please take down the fence and save the wonderful elk

Correspondence ID: 341

I am writing this letter and support of removing the fence that pens in tule elk. I have visited the park on numerous occasions, and was shocked to see the number of farms and cattle in the area. That is bad enough and they should be phased out as soon as possible.

In the meantime, to prevent the elk from starvation, their range needs to be expanded, and the fence needs to be removed.

The national park service has a long history of protecting the land, and the animals that live on it. I hope they will exercise their powers and act in the best interests of the elk.

Correspondence ID: 342

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle and other grazing farm animals in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. The water leaving Point Reyes has one of the highest coliform bacterial counts in the national, all from cattle manure getting into the streams. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Correspondence ID: 343

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

Ellen Mack, MD

Correspondence ID: 344

The Tule Elk Fence at Tomales Point in Point Reyes National Seashore is a cruel barrier.

Please remove it. I could write many more words, but the meaning would be the same. I'm begging you to approve removal of this horrible fence.

Regards,

Sharon Osberg

Correspondence ID: 345

Please remove the fence at Pt. Reyes National Park and let the wild elk move freely and have a chance at survival. Cattle ranching should be removed.

Correspondence ID: 346

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

Point Reyes is a special location that provides incredible wildlife viewing in close proximity to a major city, it is one of the best opportunities for urban residents to experience wildlife. With that they should be able to observe wild free ranging elk.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Correspondence ID: 347

Point Reyes is a gem that I pray is protected for all to enjoy. I especially love visiting & photographing the wildlife. This includes the tule elk which have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service. PLEASE REMOVE THE TULE ELK FENCE at Tomales Point in Point Reyes National Seashore.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Correspondence ID: 348

I support Alternative B, removing the fence. All of the elk at Point Reyes should be free to roam the preserve.

Further, dairies and cattle farms should be removed from all land owned by the National Parks Service. Cattle grazing decimates ecosystems, contaminates the water supply with fecal bacteria, spreads invasive species and disease, and wastes massive amounts of water.

Correspondence ID: 349

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

As a lover of this region and a staunch supporter of native species protection, it concerns me deeply that the magnificent Tule elk have suffered for decades behind this fence. As reported by

the National Park Service, hundreds have died due to lack of water and proper forage. This must not be allowed to continue.

Further protections for the elk should be administered, including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the native and natural resources of the park above all else.

Thank you for reading.

Correspondence ID: 350

I support removal of fencing that contains Tule Elk at the National Seashore. I don't visit to see the cows, my family and I go to see the wildlife. Seeing Tule Elk is always a highlight, and I urge the US Park Service to take all necessary measures to protect the Tule Elk. Removing the fencing would be a good start but there must be more that can be done. Thank you.

Correspondence ID: 351

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service. The elk in this park are so loved by visitors of the park and we want to ensure they are protected and able to forage and access water naturally.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Correspondence ID: 352

FREE THE TULE ELK IN PRNS

It's time for the national park to really be a national park, not a commercial cattle ranch. The number one job of NPS is to protect the natural resources of the park.

Thank you,

David

Correspondence ID: 353

Dear NPS,

I am writing in support of taking down the elk fence.

While I no longer live in Marin County, for 15 years I worked as an independent tour guide, naturalist, and nature educator who led countless tours, classes, and field trips all over Point Reyes, including Tomales Point. I am acutely aware of the impacts and limitations that the elk fence has on the tule elk population, both ecologically and from the perspective of the visitor experience. I am also firmly opposed to cattle grazing in the Park, and with every outing, and every group I've taken to Point Reyes we've had to literally hold our noses and avert our eyes to avoid the unpleasant experience of dealing with cows. There is no single aspect of these cattle operations that is compatible with the visitor experience in a National Park, and the "living

history” is a sham because the reality is run-down moldy buildings, trampled fields, liquid manure, and deeply rutted hillsides. I realize that the Park Management team may have its own ideas, so I'm speaking solely from the perspective of the low-grade visitor experience. And to maintain this sham the elk have historically, and are currently, suffering tremendous harm and stress. Therefore, I ask that the Park begin the process of undoing this damage by removing the elk fence.

If it's not already clear from my comments, I feel very, very strongly about this. I am tired of visiting Point Reyes to see damaged landscapes and elk trapped in “wilderness cages.”

Correspondence ID: 354

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Correspondence ID: 355

There are many reasons to remove the fencing that has limited the range of Pt. Reyes's tule elk but two are especially salient. The elk range is so artificially limited that the herd has difficulty maintaining a healthy diet and social patterns for one, and secondly the domestic cows that compete for acreage are damaging the ecosystem for all of the wild species at the Pt. Reyes National Seashore. Removing the cows which disturb the land and pollute the water supply will solve the problem for the elk.

Correspondence ID: 356

Please take down the fences and have Tule Elk roam free!

Correspondence ID: 357

The elk make Pt. Reyes special and wild. It's far more to me, as a frequent visitor, than just some beaches and hills. Pt. Reyes is home to these amazing animals and other wildlife who have their homes there. Unlike the cows and ranchers, these animals have nowhere else to go. They either live at Pt. Reyes or they die, and we as humans are so much the poorer for losing them.

Please remove the fences that prevent the elk from getting to the necessities of life, including water. The fences are cruel and need to be removed immediately.

When I lived in Marin County, I visited Pt. Reyes dozens of times a year, and the elk were a large part of the reason for this. Now I live out of state, but visit the Bay Area whenever I can. I often avoid Pt. Reyes, as the doomed and suffering elk make me so sad and helpless.

Please save the elk!

Janice Stanger

Correspondence ID: 358

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore. This fence has caused many elk to die due to lack of water and proper forage.

The elk should be further protected by removing all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. Point Reyes should be safe for the elk and enjoyed by the many recreational visitors to Point Reyes, and not a handful of landowners who can move their cattle elsewhere.

Correspondence ID: 359

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

Correspondence ID: 360

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

Correspondence ID: 361

- Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.
- Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.
- Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.
- Once the elk fence is removed allow the elk to roam freely and steps should be taken to avoid any culling, hazing, or harassment of the elk for any reason.
- Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Correspondence ID: 362

Remove the fence at Point Reyes! It is unconscionably cruel to block the Tule elks' access to water!!!!

Correspondence ID: 363

The elk need protection not killed, the allotments are taking precedence and have created a mess. It is a park and there are certain standards that are not being upheld and are of great concern needing to be rectified. The dairy cannot use this as a dumping ground as well. This is a refuge not a dump and the cattle are degrading the area and the fences blocking areas the Elk need to survive is dangerous for an iconic species the park is known for and I am not in favor of

this kind of management. There is a public outcry to stop this and I hope you pay attention to their voices. As an educator families and children are watching this species suffer and not thrive.

Correspondence ID: 364

Dear NPS,

Please do your part to support the Tule Elk and move forward with your "Alternative B", thus removing the fence from the Tule Elk Reserve. Much of the CA seashore is dotted with cattle ranches, only here and in Central CA are there two Tule Elk Reserves, with incredibly low population sizes and genetic diversity. The Tule Elk is a state treasure and iconic being deserving of this move on your part. Thank you.

Lucas Barrera

Lifelong resident of California

Correspondence ID: 365

I would like to request that you remove the tule elk fence at Point Reyes because this is resulting in many deaths of the elk who are unable to get water and resources.

These beautiful animals need access to resources such as water to survive and we need to consider removing the cattle so the native elk do not become infected with all the diseases that cattle have. If we delay this it might cause a disease outbreak and wipe out the population which would be a historic loss and generate a lot of negative press for the park service.

Thank you for your consideration in making this urgent change. Respectfully yours,

Jason Heitzler

Correspondence ID: 366

Please preserve the Tule Elks. They are native to the region. Do not disturb them.

Correspondence ID: 367

Dear planning Dept

I'm in favor of removing the fence and letting the Tule elk extend their range , I vote

I'm fable of removing the fence

Correspondence ID: 379

Please do not fence the Tile Elk in.

Correspondence ID: 380

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk should have full access to water and food/foilage that they would have by removing all fences.

Cattle should be removed from the Point Reyes National Seashore as they are not native/protected/wild species. Their manure does harm to the environment as well as carries diseases harmful for Tule elk.

Correspondence ID: 381

It is absurd Ranchers of Tomales Bay have the degree of latitude with ranching and damaging the eco system in the area. If it was possible to follow the money, it would be easy to discredit those involved: both politicians and ranchers have a stake in the business end of the ranching, greed and power are a strong motivation not to change.

The National Park Service knows what is morally right, it is just a matter if they have the gumption, clout and federal backing to make significant and necessary change. It is going to take a strong person from the National Park Service to standup to those ranchers and politicians.

I have traveled to Tomales Bay for the past 10 years as a wildlife photographer and have seen a gradual deterioration of the environment, the only item to stay pristine is the Point Reyes Lighthouse.

As a society it is our responsibility and need to take care of our park systems for future generations.

Please do what is right.

R A

Correspondence ID: 382

Pt. Reyes, has always been a refuge for wildlife...but now the agricultural if forcing out the wildlife. Just a short drive from a major metropolis, one can experience true seashore

wilderness. That's what we the peoples want...not raanches! Not cows! Please save the Tule Elk and stop expanding ranching in Pt. Reyes!

Correspondence ID: 383

Correspondence ID: 384

I visit the Point Reyes National Seashore often. I go there to see the wildlife like Tule Elk, bobcats, coyotes, foxes, otters and countless species of birds. It's a national treasure of wildlife sighting opportunities especially critically endangered species like the Tule Elk.

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore.

Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

I think that the fence needs to be removed. The elk are the native species and they deserve a chance to access their native terrain to get food and water.

Correspondence ID: 388

Having read through the alternatives to what is currently on the table, my vote would be for Alternative B but with a bit of a tweak. Make sure the herbicides, if needed to be used in an extreme case, would not be harmful to animal or human, and do not completely remove the

supplemental watering system. That way should the need arise, at least the area wildlife has supply to some supplemental water.

As it is, Alternative A is basically a “leave it the way it is” with a few tweaks, and Alternative C should be thrown in the garbage can. Enough elk have already perished due to the change in weather. If the herd gets too big, relocation would be a better option.

Correspondence ID: 389

As a child I lived in Sonoma county and Point Reyes National Seashore was my favorite place to see wildlife in the bay area. I feel in love with the Tule elk at Tomales Point. As an adult I have been very involved with movements to remove the fences from Pierce Point Ranch and I am all in favor of Alternative B. I want the fence to be removed and the Tule Elk to have full access to the national seashore. I am fully in favor of the Graton Rancheria to have their part in applying tritonal ecological knowledge back to the area. I am happy to see the National Park Service beginning to implement what its actual mission is for our public lands. I hope it leads to the eventual removal of private enterprise in the form of dairy farms and beef ranching out of the seashore, but this is a great first step for now! I am all in favor of alternative B. Thank you!

Correspondence ID: 390

Dear National Park Service, I absolutely, wholeheartedly, agree with your preferred “Alternative B” to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park’s streams and poisoning elk, fish and all wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-bourne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you and I trust that you will do the right thing.

Irina Newbold

Correspondence ID: 391

I support the proposal to remove the fence for elk and allow them to roam free (Alternative B).

Correspondence ID: 392

Get Rid of the elk fence!!! I agree with your alternative B

Correspondence ID: 393

Correspondence ID: 401

As a wildlife biologist and as someone who has lived in Marin for my entire life, I believe the only ethical answer would be to go along with Alternative B and remove the Tule Elk fence. No wild animal population, lest one that has historically been extirpated, should be confined in a fenced area on public land. Land traditionally used by free-ranging herds that was only changed at the behest of the dairy industry. No visitor goes to a national seashore/park to see wildlife that is fenced in. That is what zoos are for. The fence also leads to elk being unable to move to other parts of the seashore and get proper forage and nutrition. This has led to unnecessary die-offs and malnourished calves.

Thank you and please choose alternative B.

Correspondence ID: 402

Hi,

In reviewing the Tomales Point Area Plan I stand behind Option B which is to remove the elk fence.

As a resident of Inverness and a regular user of the Point Reyes Seashore, as a hiker I would like to see all ranches eliminated from the seashore. They are no longer needed there. I have seen a lot of destruction of the land due to cows when I hike. The E-Coli measured indicates too much bacteria in the water that is dangerous to people as well as wildlife. The dumping areas of garbage found at some ranches is deplorable. The carbon footprint at the seashore from the cows is very high and in a time of climate change it's very threatening to the environment.

I feel that the PRNS needs to stop prioritizing the ranches. It is long overdue that the public should be able to access all the parklands for recreation and enjoyment which is far from the case at this time. Also, the health of the tule elk herds as well as all wildlife is threatened by the toxicity of the land and the water. There are plenty of ranches and farms providing sustainable food sources all over Marin and Sonoma County. Besides, meat and dairy intake has gone way down as plant-based options are a more viable choice for many people.

Thank you for your consideration in the matter as it is very timely.

Kind regards,

Andrea Glass

Correspondence ID: 403

Animals are meant to roam, and having wild animals in a fenced area doesn't appear to be working, many died during the drought.

The balance between humans and animals is a challenging one, we have many issues here as well where I live. I do think that their migration and movement has been here longer than most of us.

Taking down the fence is the only right thing to do for the elk. I was disheartened when so many died a couple years ago with the drought. This shouldn't have happened.

The farmers need to have a fence to keep their animals in, although I don't support farming animals, these animals are used to being contained. Not elk.

I hope you do the better thing for the elk. In Banff, AB the elk come to rut it was their home first, the humans can choose to avoid the area during that period but to take away what comes natural to the elk would be wrong.

I hope you consider taking down this fence.

Regards

Rita

Correspondence ID: 404

I am writing to express my immense disapproval of the current management plan of the tule elk in Point Reyes National Seashore, specifically in the Tomales Point Area. For decades, the elk - an integral ecological and historical component of the park - have been subject to unacceptable conditions perpetuated by the park service. It is extremely disturbing that the park service has consistently chosen to prioritize the profits of a handful of private cattle operations over the wellbeing of the landscape's native wildlife. We will not wait any longer for the park to start prioritizing the protection and preservation of one of the country's most unique and biodiverse landscapes... Remove the elk fence now!

I strongly support the implementation of the Point Reyes National Seashore Tomales Point Area Plan Alternative B (Unconfined Elk Herd) and strongly reject the proposed Alternatives A and C.

Correspondence ID: 405

Dear National Park Service,

I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore, which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

In addition, I want all these private cattle ranches removed from our public park. Their thousands of cows produce millions of gallons of manure and urine every year, contaminating the park's streams and poisoning elk, fish habitat and other wild animals — and humans too! Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-borne cattle diseases common in these commercial dairy and beef operations.

Finally, rancher conduct including the protection and monitoring of water quality needs to be monitored and proper enforcement must be conducted when needed. Ranchers must be prohibited from hazing, harassing, or harming any elk or wild animals in the park, ever.

Thank you,

Andy

Correspondence ID: 406

I support Alternative B! Please allow the Tule Elk herd to roam freely across all of Pt. Reyes with the removal of the fence. These elk have been artificially confined to a small part of the island where there is insufficient food and water, especially during drought conditions.

Pt. Reyes is an incredible seashore park! Please restore this area to its nature beauty, including the eventual end to cattle ranching to protect the local lands and waters from ranch pollution.

Thank you!

D.B.

Correspondence ID: 407

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National seashore.

The elk have suffered for decades, trapped behind this fence. Hundreds have died due to lack of water and proper forage, as reported by the national park service.

Further protections for the elk should be administered, including the removal of all cattle in Point Reyes National seashore. Tule elk can contract diseases from the manure from these domestic animals. It is the National Park Service obligation to protect the natural resources of the park above all else.

Please do what is right and not just serve the monied interests that have been running things.

Correspondence ID: 408

PLEASE take down the fence imprisoning the Tule Elk! Let the poor beings live their lives naturally! This is so sad and disgusting! The human race just continues to hurt and destroy everything! Don't be another black mark on nature! PLEASE TAKE DOWN THE FENCE AND LEAVE NATURE AND WILDLIFE BE!!

Correspondence ID: 409

The primary purpose of the protected area is to provide safe haven for native wildlife. The Tule elk living in the Point Reyes National Seashore should be conserved and the management of the park should primarily take into consideration the management needs of the elk and other native wildlife. Prioritizing the commercial rearing of livestock over the needs of native species is mismanagement of a park and its natural resources and the conservation needs of the Tule elk requires a reassessment so they have access to fodder and water. The removal of obstructive fences needs to be prioritized.

Correspondence ID: 410

I ask that you please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

It is the National Park Service's obligation to protect the natural resources of the park above all else. All cattle in Point Reyes National Seashore should be removed. Tule elk can contract diseases from manure from these domestic animals.

It is common knowledge that the Tule elk have suffered greatly. They are trapped behind this fence. The National Park Service has reported that hundreds have died due to lack of water and food, while the cows on the other side of the fence have adequate food and water.

Correspondence ID: 411

The Point Reyes National Seashore must remove all fence limiting elk vagility to roam freely. Limits on Elk range have caused losses of tule elk population from over 450 to just over 200. Ranchers who have put up fences should be removed from the national seashore. The ranchers were already paid many years ago, and their leases should not be extended. Cattle have degraded waterways and creeks, have destroyed topsoil, and have caused disease and illness among elephant seals who have had to endure the effluent driven runoff from the manure piles of the ranches.

Option B, removing the ranches and ending their leases, is the preferable option from an environmental, climate, and justice viewpoint. Please end the ranching in the Pt Reyes National Seashore, adopt alternative B to terminate the leases, and remove all fences that limit the tule elk population.

Correspondence ID: 412

*Dear National Park Service, I agree with your preferred "Alternative B" to remove the Tule Elk Reserve fence at Tomales Point inside Point Reyes National Seashore. — which has confined the elk (for 45 years, since 1978) only to benefit private cattle ranches.

Commercial cattle operations pollute and have no business being in this or any national park.

Once the elk fence is removed, elk must be protected from greater exposure to manure-bourne cattle diseases common in these commercial dairy and beef operations.

Finally, ranchers must be monitored and heavily fined if they haze, harass, or harm any elk or wild animals in the park, ever.

Thank you.

James Utterback

Correspondence ID: 413

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

Correspondence ID: 414

Thank you, National Park Service, for finally listening to the overwhelming voice of the public

and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Correspondence ID: 415

Please remove the 8-foot fence that is preventing the Thule Elks from foraging for food and water. They had been dying due to the drought and the lack of water and food. It is really ridiculous to allow the cattle to graze on the Thule Elk's land. while the Thule Elks are starved. Where is the responsible adult here?

Correspondence ID: 416

Please remove the fencing enclosing the elk and let them roam free in their Sanctuary, 85% of which is a designated wilderness area. I thought wilderness areas weren't supposed to have fences?

Including input from the Federated Indians of Graton Rancheria is a good idea

Correspondence ID: 417

Please please please take down the fence that is restricting the movement and health of the Tomales Point Tule Elk Herd. These are animals that we should revere and honor as their species was almost completely decimated. Pt. Reyes National Seashore has the chance to be the heroes, the place that brought a native species back, to its native habitat - a model for the entire world!

What has been happening to the Tule Elk thus far, the restrictions of movement and grazing has been a death sentence for these animals. The point is not a complete landscape, it does not have enough natural water and forage for any grazing herds. The Tule Elk a native species is restricted in movement in a non-viable area, all at the expense of allowing cattle to graze on what should be their natural feeding area. Elk do not impact the land in the same way that cattle do, they actually help the health of the landscape. unlike cattle.

When I first visited PRNS, I was shocked at how much of it was fenced off for ranches I thought it was a National Park, yet, there were actually very few places to walk and see wildlife without fences causing barriers to the visitors and or the animals. The fenced areas are quite dead and damaged and without natural vegetation, As we visited more and more often, I found that the National Seashore is largely made up of cattle ranches and wild animals have to navigate the fence barriers and ranchers to survive.

With the Tomales Point Tule Elk, they have been so restricted that during drought (which is a long term condition) elk died of thirst and starvation in massive numbers. This is completely preventable by taking down the fence and allowing the elk to find natural water and food sources. Small numbers of animals will die in a natural habitat, but the hundreds that died in the past three years are unconscionable.

Having cattle as an industry in a National Park is a dark stain on California, and must be addressed. In the interim however, the best thing the Park Service can do is to remove the fence that kills elk and let them use their own instincts to survive. After being decimated to under 10 individuals, these animals deserve more from the people of California and the United States.

Correspondence ID: 418

Please execute Alternative B, Unconfined Elk Herd and Pierce Ranch Core Area.

Thank you, National Park Service, for finally listening to the overwhelming voice of the public and removing the elk fence from Point Reyes. Fences are inappropriate in wilderness, and cattle should not be prioritized over wild animals.

Confined native elk dying of thirst and malnutrition in a National Park is not acceptable.

Once the elk fence is removed, the elk to roam freely and steps should be taken to allow avoid any culling, hazing, or harassment of the elk for any reason.

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as “the maximum protection, restoration, and preservation of the natural environment within the area,” and in the Organic Act of 1916 as to “provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

Correspondence ID: 419

I support the proposal to remove the fence for elk and allow them to roam free (Alternative B).

Correspondence ID: 420

Remove the fence!

Correspondence ID: 421

Correspondence ID: 423

Dear National Park Service,

I am a proud resident of Marin County. My family and I are regular visitors to the Point Reyes National Seashore, a place we hold dear to our hearts. Today, I write to you with a heart full of gratitude and a plea for the preservation of the natural beauty that is Point Reyes.

First and foremost, I want to express my sincere thanks for acknowledging the public's voice and deciding to remove the elk fence from Point Reyes. This decision signifies a step in the right direction — towards a wilderness where the native elk can thrive, and where nature can take its course without the constraints imposed by man-made barriers.

However, I must express my distress over the ongoing suffering of the native elk due to thirst and malnutrition. It is disheartening to witness such magnificent creatures endure hardships in a place that is meant to be a sanctuary for them. As the fence comes down, it is of utmost importance that we ensure the well-being of the elk by allowing them to roam freely and by implementing measures to prevent any form of harm, including culling, hazing, or harassment.

Moreover, as a resident deeply connected to this land, I must question the continued presence of cattle operations in Point Reyes. The mandate of the Point Reyes Enabling Legislation and the Organic Act of 1916 is clear: we are to protect, restore, and preserve the natural environment for the enjoyment of present and future generations. It is with this mandate in mind that I respectfully request the cessation of cattle operations within Point Reyes.

The preservation of Point Reyes is not just a local concern, but a matter of national importance. It is our duty to honor the legacy of those who fought for the creation of our national parks by ensuring that we leave Point Reyes unimpaired for the enjoyment of future generations.

In closing, I extend my heartfelt gratitude to the National Park Service for your ongoing efforts to protect and preserve our natural heritage. I trust that you will take my plea to heart and make the decisions necessary to safeguard and prioritize the wildlife and natural beauty of Point Reyes National Seashore over agricultural operations.

With deepest respect,

Ari Nessel

Correspondence ID: 424

Free the Tule Elk!

The ranchers were paid a lot of money more than a decade ago to leave and yet the stupid cows are still on the land. The cows have polluted the land, the streams and the beach! I'd like to know who the ranchers have been paying off at the park service to allow cows to continue grazing on Nation Park land. Maybe the DOJ should look into the bank records of those in charge?

Point Reyes is the most polluted National Park in the country! The people cannot even use the park because the cows have spread disease and yet the Park Service does nothing to clean it up!

Soon this demand to remove the cows and save Point Reyes and Tule elk is going nationwide. No longer are the ranchers there going to be able to pay off government employees so they can graze their nasty cows on public land while killing the Tule elk...

Correspondence ID: 425

About one-third of Tomales Point's elk herd — or a reported 152 elk — died during California's 2020 drought, reportedly from dehydration and starvation. Free-roaming elk outside the fenced area did not experience the same population fluctuations or declines.

NPS's treatment of the elk to date — said elk must be protected “in a manner that protects that population's health, safety and ecological integrity.” They have been brutalized, cut of

We must speak up now for elk and voice our support of Alternative B! These elk already are facing enough of a threat from climate change, thirst, and malnutrition — they need all the support they can get! I want the fence removed and as an original Ohian I understand the park director is from Cuyahoga county.

I support the proposal to remove the fence for elk and allow them to roam free (Alternative B). I have watched the elk starve and be cut off from water and it cost millions of tax payers Dollars to bring them back from extinction and now to watch them die has been unmerciful and disrespectful to the tax paying stake holders of our public lands. Let them LIVE, let them have forage and water. It has been brutal to fence them off from cattle that grazes for a pittance.

I support the removal of the fence and it has been too long standing. Let the elk eat and drink freely.

Correspondence ID: 426

Cattle operations are no longer appropriate in Point Reyes and should be ceased to honor the true charter of our Seashore, stated in the Point Reyes Enabling Legislation as "the maximum protection, restoration, and preservation of the natural environment within the area," and in the Organic Act of 1916 as to "provide for the enjoyment of the scenery, natural and historic objects, and wildlife in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

Correspondence ID: 427

A few years ago, I came across a picture of a Tule Elk in a magazine describing a national park bordered by a seashore with an abundance of wildlife, a truly unique destination for a naturalist and wildlife photographer. Could this really exist I asked myself? To have all of these scenic scapes together? The place was Point Reyes, and I immediately began making plans to visit. The park did not disappoint with its unique balance of forest, green pastures, domestic animals living in harmony with wildlife, plus the beach to explore the seascape and its fauna. Later, when I read that the National Park Service was out to condemn the Tule Elk, my heart sank, and I am still saddened that our national park system could allow such betrayal of wildlife.

I implore you to please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

If it comes to choosing cattle over the elk, the elk should be given first provision. This land and the wildlife was here before man ever thought about raising cattle on these grounds. Once the wildlife is gone, it will be difficult, if impossible, to ever retrieve it again. That is sad news for mankind.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Correspondence ID: 428

It's a park, intended to preserve nature. Please help the Elk.

Correspondence ID: 429

I support taking down the fence and allowing these poor creatures the ability to live in peace with adequate water/food. The horrific and deliberate suffering and imposed death sentence the fencing has long caused needs to stop now.

Correspondence ID: 430

The National Park Service has finally proposed taking down a fence that confines rare Tule Elk to a fraction of the Point Reyes National Seashore, a fence that should never have been there in the first place.

Alternative B would allow the elk, currently in a 2,900 acre area of poor forage known as the "Preserve," to finally roam free as God and nature intended before our government betrayed us all with their collusion with cattlemen. It also would allow the NPS to consider building a fence to keep privately-owned cattle from entering Tomales Point.

The other two alternatives would leave the fence where it is, and one would allow staff to shoot the rare elk to death, which disgusts me to no end. Elk must be protected in a manner that protects that population's health, safety and ecological integrity. The cattle have no business there in the first place. How have you allowed the invasive species cattle to live while killing our native animals? This must stop.

Correspondence ID: 431

Save these majestic rare elk. Take down the fence. We The People are watching and sharing on social media's.

Correspondence ID: 432

I urge you to please take down the fence restricting the Tule Elk in Point Reyes National Seashore. These wonderful animals are dying an excruciating painful death by starvation which is not deserved or justifiable of any living thing. Shooting them to death is NOT an option. I support and encourage you implementing Alternative B, which would take down the 25 year old fence that is causing this devastation.

Thank you for your time,

Robert Jensen

Correspondence ID: 433

I agree with your 'preferred alternative B' to remove the fence!

I've been very sad for a long time about the native wild Elks being fenced in. I've stopped visiting the park because it makes me to sad. I don't understand how a national park would prioritize dairy cows over the wildlife native to the park. This is bewildering to me. Thank you for finally removing the fence!

Correspondence ID: 434

Please remove all elk fences, after removal please ensure that the elks are forever protected.

Please remove all cattle ranches, cows grazing in Sonoma/Marin/NorCal.

Cow farms/ranches/factories contribute to our environmental crisis.

Sonoma and Marin must be a leader to protect our environment and to stop all animal cruelty.

Teach farmers how to grow food aka produce, not animals .

Animals are not food, let's stop breeding them as if they were a healthy source of food.

Thank you for removing the fences for the elks and ensuring that they are safe as well that the cows can go to sanctuaries.

Let's make California better!

Thank you

Correspondence ID: 435

I agree with your proposed alternative B.

Correspondence ID: 436

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Plus, the cattle shouldn't even be there in the first place, along with thee ranchers! They ALL need to go and full protections for all wildlife and wild lands (AS IS THE LAW IN NATIONAL PARKS) needs to be adhered to immediately with no exceptions. The ranchers contracts were over in 1987, get them out of there!

Correspondence ID: 437

I strongly agree with and encourage "Alternative B" and removing the existing elk fence.

Dan Williams

Correspondence ID: 438

Alternative B just makes sense. If conservation in California includes the desire for our native fauna to exist along side us, we must give them room to do so! Removing the elk fences and separating cattle to reduce disease is imperative for this projects success. It is time to draw

some new lines in the sand with cattle grazing allotments to protect our native flora and fauna. Cattle do not provide the same ungulate presence that many landscapes need to thrive.

Prescribed fire is long over due as a widely used method for invasive plant management and to decrease fire load. Partnering with local tribes is just a must at this point, the cultural heritage of this land and its biodiversity depends on it.

As an avid recreation user of wild spaces in CA, I would gladly give up open access to more limited access in order to allow wilderness to persist with minimal impacts from humans. I would not visit in fear with tule elk roaming, it's a chance to be more aware of our surroundings and explore with respect!

Let's make the right choice and do what's good for the land!

Correspondence ID: 439

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

It is not the other animals fault. It is human made catastrophe there is not enough water.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Sheri Williams

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Tricia Shields

Correspondence ID: 447

Dear National Park Service, I agree with the removal of the Tule Elk Reserve fence at Tomales

Point inside Point Reyes National Seashore. Let them be wild and free and not die behind a fence with no water. We must protect these precious native animals. Thank you!

Correspondence ID: 448

We support Plan B, that is, removal of the elk fence. The ecosystem in that had been engineered to death for everything but cows, makes no sense.

Correspondence ID: 449

STOP CALIFORNIA'S TULE ELK FROM DYING OF THIRST BECAUSE OF ANIMAL AGRICULTURE

It's disgusting to think that our tax dollars are going on confining and killing wild animals in a National Park and subsidizing the people who are killing them.

There are about 500 elk in the park, in three different herds. The largest herd is behind that fence, with about 260 animals currently, and they suffer and die because they are confined. The cattle ranches are privately owned renters of the land. They do not own the land. They sold the land for millions of dollars decades ago but have, with their political and economic clout, lobbied the government, and I would say influenced the National Park Service policy about wild animals.

In other words, we want the fence down and we also care about having the ranches out. They were paid off years ago, they were given very generous compensation from taxpayers to leave and establish ranches elsewhere.

Thank you for your attention,

Louis

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Shannon Jacobs

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Angie Smith

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Lisa Barrett

Correspondence ID: 563

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Dawn Orahood

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Jared Greer

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, Alternativa B” preferida del Servicio de Parques Nacionales para la Reserva de Alces de Tule de Tomales Point en Point Reyes National Seashore, para eliminar la cerca y liberar a la manada más grande del parque de alces de Tule. Las cercas y los animales confinados no tienen cabida en las unidades del parque nacional.

Además, rescinda oficialmente la regulación actual en el Plan General de Gestión que permite matar (“sacrificar”) alces en los otros dos rebaños, ya que los rebaños pueden entremezclarse cuando se retira la cerca. Me opongo a toda “gestión” letal de cualquier animal salvaje en nuestros parques nacionales.

Finalmente, el alce Tule de Seashore no puede ser libre, saludable y seguro hasta que se eliminen las operaciones privadas de ganado porque exponen a los alces a bacterias fecales en el suelo, arroyos y estanques, y enfermedades del ganado transmitidas por el estiércol, incluida la enfermedad de Johne. El propio NPS cita un estudio de 1979 que encontró que la

mitad de los ranchos lecheros del parque estaban infectados con la enfermedad de Johne. Las operaciones privadas de ganado no tienen negocios en nuestros parques nacionales.

Agradezco al Servicio de Parques Nacionales por solicitar y considerar los comentarios públicos sobre este tema tan importante.

Sincerely, Ms. Pilar Barranco

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Nicole Rosanowitsch

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Francesco Marconi

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely, Miss JOCELYNE DE POORTER

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Carol Lynn Anderson

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Benny Holdren

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Suzanne Marienau

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Denise Anzelmo

Correspondence ID: 774

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park

Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

America's wild animals should always be prioritized on our beautiful public land, especially in a National Park.

Privately owned livestock do not belong on America's public land or in America's National Parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Patricia Dangle

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, ms p scoville

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Jo-Ann Carmody

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Bob Ayers

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, TIA TRIPLETT

IT IS PARTICULARLY REPREHENSIBLE THAT THESE RANCHERS, FROM WHOM WE, THE TAXPAYERS OF AMERICA, ALREADY BOUGHT THEIR RANCHES MANY YEARS AGO, ARE NOW SQUATTING ILLEGALLY ON NATIONAL PARK PROPERTY!!! PLEASE...REMOVE THESE SQUATTERS, RESTORE OUR NATIONAL PARK AND FREE OUR WILDLIFE, THE TULE ELK WITH NO SO-CALLED "CULLING"!

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. N. Vann

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Uwe Vietzke

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, Civilized sane people PROTECT animals.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Eleanor High

Dear Craig Kenkel - Point Reyes National Seashore Superintendent, I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms Carol Crowell

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Emily Macdonald

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Kathy Mora

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Darlene Baneky

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Irene Sewell

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs Birgitta Granholm

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Andrea Dezendorf

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Craig Cline

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Glenna Volpe

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Paula Neville

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Heidi Hart-Zorin

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. M Rute Correia

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Nancy Hile

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Janet L Rhodes

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms Marsha Render

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Laren Kessler

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Charles Favorite

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Grace Gutierrez

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mr. Alfred Pannone

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

Officially rescind the regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds, since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

The Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed. They expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

Sincerely, Ms. Jennifer Nitz

As an animal lover and resident of California's central coast, I am asking the NPS to please endorse Plan B - the removal of the 3-mile-long fence at Point Reyes National Seashore that is causing the starvation and deaths of the indigenous Tule Elk.

These majestic creatures are gruesomely dying due to the actions and pressures of the local cattle ranching/animal agriculture industry.

It is expected of the National Park Service to find solutions to responsibly manage not only this endemic elk, but all wildlife in a humane and sustainable manner.

Voting in favor of Plan B is simply the right thing to do.

Please support Alternative B: Unconfined Elk Herd and Pierce Ranch Core Area.

Tule elk are endemic to California and once numbered half a million strong, providing a critical source of food and clothing to the Coast Miwok people. In a sad parallel to the Plains Buffalo, they were nearly hunted to extinction in the mid-1800s. The remaining few were protected and there are now an estimated 5,700 Tule elk now living in 22 herds throughout California. As the dominant native herbivore in our grasslands, the elk are vital to preserving the California ecosystem.

Point Reyes National Seashore is a very special place, both to the First People and to the many visitors who come every year. However, this “protected” seashore is being ravaged by beef and dairy operations within its boundaries.

When PRNS was established in 1962, cattle ranchers sold their land to the National Park System (NPS) but continued operations under a leasing arrangement – which was not intended to continue in perpetuity. In fact, one third of the land set aside for the national park is being used by 24 industrial ranches with some 5,600 beef and dairy cattle inside PRNS.

The cattle use vast amounts of water and land to graze. In return, they dump 10 million gallons of feces and urine on national parklands every year. They trample habitat, kill endangered grassland species, introduce invasive weeds, and despoil streams with fecal coliform, imperiling threatened species such as Coho salmon and California red-legged frogs, among others.

These ranches add little to the economy. “Beef and milk are overproduced in California and the United States, and both are heavily subsidized, holding prices below actual costs,” says Bob Johnston, Inverness resident and retired professor of land use planning at UC Davis.

NPS has fenced the elk inside one part of the national seashore, effectively trapping when food and water grow scarce. There have been numerous deaths of elk in this area, the sole reason being they can't leave the area to forage for food and water.

Please recognize the status of PRNS as a protected area and allow this fence to be taken down so the elk can roam freely.

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that

found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Beth Adkins

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Murielle Berger

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Elisabeth DIAS

Correspondence ID: 1658

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Ich unterstütze die vom National Park Service bevorzugte "Alternative B" für das Tomales Point Tule Elk Reserve am Point Reyes National Seashore, um den Zaun zu entfernen und die größte Tule-Elchherde des Parks zu befreien. Zäune und eingesperrte Tiere haben in Nationalparkeinheiten nichts zu suchen.

Bitte heben Sie außerdem die derzeitige Regelung im Allgemeinen Bewirtschaftungsplan auf, die das Töten ("Keulen") von Elchen in den beiden anderen Herden erlaubt, da sich die Herden vermischen können, wenn der Zaun entfernt wird. Ich bin gegen jegliches tödliche "Management" von Wildtieren in unseren Nationalparks.

Schließlich kann der Tule-Elch an der Küste nicht frei, gesund und sicher sein, bis private Rinderbetriebe entfernt werden, da sie Elche Kotbakterien im Boden, in Bächen und Teichen sowie durch Gülle übertragenen Rinderkrankheiten, einschließlich der Johne-Krankheit, aussetzen. Der NPS selbst zitiert eine Studie aus dem Jahr 1979, die ergab, dass die Hälfte der Milchviehbetriebe des Parks mit der Johne-Krankheit infiziert war. Private Viehzuchtbetriebe haben in unseren Nationalparks nichts zu suchen.

Ich danke dem National Park Service dafür, dass er öffentliche Kommentare zu diesem sehr wichtigen Thema angefordert und berücksichtigt hat.

Sincerely, Mr. Bernd Ritter

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Hussein Mourtada

Correspondence ID: 1698

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

There should be no invasive, commercial enterprises in a National Park!!! Especially not cattle ranches which go against all the reasons for creating National Parks. Herds of cattle have caused great damage to the environment that the Park was supposed to protect and the attendant relocation of the Tule Elk has been most destructive. These actions wreak of government corruption that needs to be corrected ASAP. There is no need to delay action to 2024 in order for the guilty parties to complain. Hence, I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. JACQUELINE MCVICAR

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Maria McCrae

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Miss Claire Prevost

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I commend your decision to take down the fence keeping the Tule Elk in desperate living situations on national parks lands.

Please receive this as my comment to support a yes on alternative B, removing the fence.

I will urgently demand a singular caveat that be included in that final decision regarding the Tule Elk: once the Tule Elk are freed from fenced confinement that there is no culling/killing methods used whatsoever of any of these Elk. And if the Elk move into rancher or dairy territory that any relationship you, the national park, have entered with the indigenous rancherías are not permitted to kill any of these elk in whatever contract you have contrived together.

The cattle ranches and dairy farmers should no longer be permitted to rent land in the national park, as the California Conservation Commission and many other government agency bodies have found to be true upon investigation over the past several years.

It is high time that Point Reyes National Park return to their federal commitment to be sound custodians of the wild seashore and all its wild inhabitants. That does not include confining wild animals, depriving them of water and food and providing communicable deadly diseases via cows to elk due to the political preference for US taxpayer subsidized domestic livestock on national park land.

Thank you for taking this comment and finally doing the right thing for the Tule Elk.

Correspondence ID: 1763

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

Je soutiens l'alternative B préférée du National Park Service pour la réserve de wapitis de Tomales Point Tule à Point Reyes National Seashore, afin d'enlever la clôture et de libérer le plus grand troupeau de wapitis de Tule du parc. Les clôtures et les animaux confinés n'ont pas leur place dans les unités des parcs nationaux.

De plus, veuillez annuler officiellement le règlement actuel du plan général de gestion autorisant l'abattage (« abattage ») des wapitis dans les deux autres troupeaux, car les troupeaux peuvent se mélanger lorsque la clôture est enlevée. Je m'oppose à toute « gestion » mortelle de tout animal sauvage dans nos parcs nationaux.

Enfin, le wapiti de Tule du littoral ne peut être libre, sain et sécuritaire tant que les exploitations bovines privées ne sont pas retirées, car ils exposent les wapitis aux bactéries fécales dans le sol, les cours d'eau et les étangs, ainsi qu'aux maladies du bétail transmises par le fumier, y compris la paratuberculose. Le NPS lui-même cite une étude de 1979 qui a révélé que la moitié des ranchs laitiers du parc étaient infectés par la maladie de Johne. Les exploitations bovines privées n'ont rien à faire dans nos parcs nationaux.

Je remercie le Service des parcs nationaux d'avoir demandé et pris en considération les commentaires du public sur cette question très importante.

Sincerely, Mrs. Marilou Jung

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Kathy Marshall

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred “Alternative B” for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing (“culling”) of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal “management” of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Sandi Aden

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Kuhn Kang

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Holly Graves

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

There is no fence stopping you from being with your family then why would you do this to these animals.

This is anational park open to everyone including animals. Tear down this fence now to let them be free, not confined from there families.

Stop culling yhem

This is a free national park and there is no space for killing them.

support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Hazel Crawley

Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Sincerely, Nate Campi

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Ms. Elise McCoubrie

Correspondence ID: 1916

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units. I have for many years visited this beautiful national seashore and it greatly aided me in understanding coastal ecosystems. To think that it is being given over to dairy farmers is utterly abhorrent to me and a mockery of the law!

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue. Please keep me informed of your decisions and opportunities to participate and file protest actions.

Sincerely, Craig Downer

Correspondence ID: 1917

Dear Craig Kenkel - Point Reyes National Seashore Superintendent,

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johnne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johnne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Margaret Touw

Tule Elks are endemic to California and has gone down in numbers over so many decades. We should protect and help grow them in numbers for future.

The Tule elk have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by the National Park Service.

Further protections for the elk should be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from manure from these domestic animals. It is the National Park Service's obligation to protect the natural resources of the park above all else.

Thank you.

Keeping this fence up so the elk do not have access to food and water is cruel, barbaric & inhumane. What's worse, there is no reason for it. Please have the fence removed immediately.

I thank the National Park Service for requesting and considering public comments on this very important issue.

I support the National Park Service's preferred "Alternative B" for the Tomales Point Tule Elk Reserve at Point Reyes National Seashore, to remove the fence and free the park's largest herd of Tule elk. Fences and confined animals have no place in national park units.

In addition, please officially rescind the current regulation in the General Management Plan allowing killing ("culling") of elk in the other two herds since herds may intermingle when the fence is removed. I oppose all lethal "management" of any wild animals in our national parks.

Finally, the Seashore's Tule elk cannot be free, healthy, and safe until private cattle operations are removed because they expose elk to fecal bacteria in soil, streams, and ponds, and manure-borne cattle diseases, including Johne's disease. The NPS itself cites a 1979 study that found half of the park's dairy ranches were infected with Johne's disease. Private cattle operations have no business in our national parks.

I thank the National Park Service for requesting and considering public comments on this very important issue.

Sincerely, Mrs. Cynthia Marrs

Every time I visit Point Reyes National Seashore I grow angry. Angry at the enclosures fencing in the Elk. Angry at the overgrazing destroying our heritage. Angry at the stink. Angry at the National Park Service for managing the narrow strips of land alongside the road, but not the cattle grazing lands.

Now there is an opportunity for the NPS to change course, and to begin managing Point Reyes National Seashore for the people and for the land and for the environment and NOT for politicians and lobbyists.

Here's how you begin. Please remove the Tule Elk Fence at Tomales Point in Point Reyes National Seashore.

The Tule elk herds have suffered greatly for decades trapped behind this fence. Hundreds have died due to lack of water and proper forage as reported by our own National Park Service employees.

Further protections for the elk and for our national heritage must be administered including the removal of all cattle in Point Reyes National Seashore. Tule elk can contract diseases from the over 130 tons of manure left behind yearly fouling the land and leaking into the water systems. Humans can, too, and so can the other native species depending on the National Seashore lands. It is the National Park Service's obligation to protect the natural resource heritage of the park above all else.

Thank you for taking the time to read this letter, and more importantly, to seriously consider a citizen's input above that of wealthy politicians and lobbyists.

Bradley Dunbaugh
